Fostering Integrity in Research National Academies of Sciences, Engineering, and Medicine,Policy and Global Affairs,Committee on Science, Engineering, Medicine, and Public Policy,Committee on Responsible Science,2018-01-13 The integrity of knowledge that emerges from research is based on individual and collective adherence to core values of objectivity honesty openness fairness accountability and stewardship Integrity in science means that the organizations in which research is conducted encourage those involved to exemplify these values in every step of the research process Understanding the dynamics that support or distort practices that uphold the integrity of research by all participants ensures that the research enterprise advances knowledge The 1992 report Responsible Science Ensuring the Integrity of the Research Process evaluated issues related to scientific responsibility and the conduct of research It provided a valuable service in describing and analyzing a very complicated set of issues and has served as a crucial basis for thinking about research integrity for more than two decades However as experience has accumulated with various forms of research misconduct detrimental research practices and other forms of misconduct as subsequent empirical research has revealed more about the nature of scientific misconduct and because technological and social changes have altered the environment in which science is conducted it is clear that the framework established more than two decades ago needs to be updated Responsible Science served as a valuable benchmark to set the context for this most recent analysis and to help guide the committee s thought process Fostering Integrity in Research identifies best practices in research and recommends practical options for discouraging and addressing research misconduct and detrimental research practices **Navy Program Guide** United States. Department of the Navy,2014 *Management Science in Fisheries* Charles T.T. Edwards,Dorothy J. Dankel,2016-02-26 A key goal of fisheries management is to regulate extractive pressure on a resource so as to ensure social economic and ecological sustainability This text provides an accessible entry point for students and professionals to management science as developed in fisheries in order to facilitate uptake of the latest ideas and methods Traditional management approaches have relied upon a stock assessment based on existing understanding of resource status and dynamics and a prediction of the likely future response to a static management proposal However all such predictions include an inherent degree of uncertainty and the last few decades have seen the emergence of an adaptive approach that uses feedback control to account for unknown future behaviour Feedback is achieved via a control rule which defines a relationship between perceived status of the resource and a management action Evaluations of such rules usually include computer simulation testing across a broad range of uncertainties so that an appropriate and robust rule can be selected by stakeholders and managers The book focuses on this approach which is usually referred to as Management Strategy Evaluation The book is enriched by case study examples from different parts of the world as well as insights into the theory

and practice from those actively involved in the science of fisheries management
