Eye Movement

Desensitization and Reprocessing (EMDR) Therapy Scripted Protocols and Summary Sheets Marilyn

Luber, 2015-08-19 EMDR Therapy is a psychotherapy approach based on standard procedures and protocols. This is an important resource that focuses on applying EMDR therapy to anxiety, obsessive compulsive and mood related disorders using EMDR Therapy's standard procedures and protocols as its template. Edited by a leading EMDR scholar and practitioner, it delivers step by step protocols that enable beginning practitioners as well as seasoned EMDR clinicians, trainers and consultants to enhance their expertise more quickly when treating clients or groups of clients with these conditions. These chapters reflect the expertise of EMDR clinicians treating anxiety disorders including specific phobia, panic disorder and generalized anxiety disorder, obsessive compulsive disorders including body dysmorphic disorder, olfactory reference syndrome and hoarding behaviors, and mood disorders including bipolar disorder, major depression and postpartum depression. For each topic, authors include relevant questions for history taking, helpful resources and explanations frequently used negative and positive cognitions and information on case conceptualization and treatment planning. Comprised of past, present and future templates, the scripts are conveniently presented in an easy to use manual style format that facilitates a reliable, consistent procedure. Summary sheets for each protocol support quick retrieval of essential issues and components for the clinician while putting together a treatment plan for the client. These scripted protocols and completed summary sheets can be inserted right into a client's chart for easy documentation. Scripts and summary sheets are available also in an expandable, downloadable format for easy digital access for each protocol to simplify the gathering of information and to document it in clients' charts in a consistent format. This facilitates quick retrieval of the essential issues and components needed by clinicians to create appropriate treatment plans and easy access to client information. **EMDR Made Simple**

Jamie Marich, 2011 Eye Movement Desensitization and Reprocessing. EMDR has established itself as an evidence based psychotherapy for the treatment of trauma and other related mental health disorders. Despite the numerous studies touting EMDR's efficacy, it is still largely regarded as too complicated to understand, a major factor in why many who have been trained in EMDR no longer use it. **EMDR Made Simple: 4 Approaches to Using EMDR with Every Client** offers a fresh approach to understanding, conceptualizing and ultimately implementing EMDR into clinical settings. **Integrating**

Relational Psychoanalysis and EMDR Hemda Arad, 2017-09-22 Integrating Relational Psychoanalysis and EMDR Embodied Experience and Clinical Practice provides contemporary theoretical and clinical links between Relational Psychoanalysis, attachment theory, neuroscience and Eye Movement Desensitization and Reprocessing, all of which bring both the patient's and analyst's embodied experience into the forefront of clinical thinking and practice. The author grounds an in depth view on the ways psychoanalysis and EMDR can be effectively integrated to complement each other through a presentation of fundamental concepts and an abundance of insightful and moving clinical vignettes. Hemda Arad outlines the theoretical and clinical concepts that allow the integration of Relational Psychoanalysis with EMDR's unique contributions.
