Amer, Yongqun He, 2014-10-23 Infectious disease is the result of an interactive relationship between a microbial pathogen and its host In this interaction both the host and the pathogen attempt to manipulate each other using a complex network to maximize their respective survival probabilities Programmed host cell death is a direct outcome of host pathogen interaction

and may benefit host or pathogen depending on microbial pathogenesis Apoptosis and pyroptosis are two common programmed cell death types induced by various microbial infections Apoptosis is non inflammatory programmed cell death and can be triggered through intrinsic or extrinsic pathways and with or without the contribution of mitochondria Pyroptosis is an inflammatory cell death and is typically triggered by caspase 1 after its activation by various inflammasomes Microbial pathogens are able to modulate host apoptosis and pyroptosis through different triggers and pathways The promotion and inhibition of host apoptosis and pyroptosis vary and depend on the microbe types virulence and phenotypes For example virulent pathogens and attenuated vaccine strains may use different pathways to modulate host cell death Specific microbial genes may be responsible for the modulation of host cell death Different host cells including macrophages dendritic cells and T cells can undergo apoptosis and pyroptosis after microbial infections The pathways of host apoptosis and pyroptosis induced by different microbes may also differ Different methods can be used to study the interaction between microbes and host cell death system

Microbiome Associated With Plant Pathogens, Pathogenesis, and Their Applications in Developing Sustainable Agriculture Baoyu Tian,Jian-Wei Guo,Xiao Lin Wang,Dilfuza Egamberdieva,Osama Abdalla Abdelshafy Mohamad,2024-05-28 Plant pathogens such as fungi bacteria viruses nematodes insect pests etc can pose a great threat to plants in agricultural and natural ecosystems worldwide The plant disease triangle illustrates that pathogenesis in the plant is not only the outcome of the interactions between the plant host and pathogens but also the consequence of their interactions with the microbiomes associated with plant hosts and pathogens Both microbiomes associated with plant host and pathogen regulate plant health and pathogen infection Microbes can play an important role in promoting plant growth and protecting from pathogens and or insects A healthy plant microbiome is crucial for plant survival production nutrient acquisition abiotic or biotic stress tolerance etc However the microbiome does not always cooperatively interact with plant hosts to promote host health They may also deter plant health or promote pathogenicity by the production of toxins suppressing plant innate immunity or building a symbiotic or mutual relationship with pathogens or insect pests to facilitate the occurrence of plant disease In addition the disease can result in a plant if a susceptible host plant is in intimate association with a virulent pathogen under favorable or altered abiotic or biotic environmental conditions For example growing evidence suggests disease occurrence in plants is often accompanied by changes in the associated microbial community structure composition and even function

Molecular Mechanisms of Neurotransmitter Release Zhao-Wen Wang,2023-08-24 Neurons communicate with each other by releasing neurotransmitters This book provides comprehensive coverage of the molecular mechanisms involved in neurotransmitter release The topics covered in the book range from the architecture and cytomatrix proteins of presynaptic sites to the modes of synaptic vesicle exocytosis full collapse and kiss and run and from the key molecules mediating synaptic vesicle fusion

SNAREs to those that closely interact with them UNC 13 Munc13 UNC 18 Munc18 tomosyn and complexins The book also delves into the calcium sensors of synaptic vesicle fusion synaptotagmins and Doc2s the sources of calcium that trigger synaptic exocytosis voltage gated calcium channels and ryanodine receptors and the regulation of neurotransmitter release by potassium channels cell adhesion molecules lipids aryl hydrocarbon receptor interacting protein AIP presenilins and calstabins To aid in understanding and illustrate key concepts the book includes sufficient background information and a wealth of illustrations and diagrams The new edition includes major updates to previous chapters as well as several new chapters that reflect the recent advances in the field Comprehensive and cutting edge Molecular Mechanisms of Neurotransmitter Release 2nd edition is a valuable learning resource for neuroscience students and a solid reference for neuroscientists

Biology and Pathogenesis of Legionella Hayley Newton, Elizabeth Hartland, Matthias Machner, 2018-12-07 Legionella pneumophila was first isolated as the causative agent of a deadly infectious pneumonia at a convention of the American Legion forty years ago Since then Legionnaires disease continues to be a significant public health concern Today our understanding of the Legionella genus comprising environmental bacteria and opportunistic human pathogens has dramatically increased The study of how pathogenic Legionella interact with host cells both protozoan and mammalian has not only taught us about host pathogen interactions but has revealed novel and unexpected insights into human cell biology and immunology The capacity of pathogenic Legionella to commandeer cellular processes such as eukaryotic vesicular trafficking to establish an ER like replicative niche reflects the exquisite ability of this pathogen to manipulate eukaryotic cell biology in order to replicate in an intracellular compartment This requires the specific and targeted action of a cohort of translocated bacterial effector proteins In addition we have learnt much about cell autonomous innate immune sensing of intracellular bacteria through the inability of L pneumophila to avoid intracellular mammalian defense mechanisms Now in the age of large scale comparative omics it is clear that different Legionella species utilize different cohorts of effectors to replicate inside eukaryotic cells While we understand some of the strategies employed by L pneumophila and L longbeachae to replicate within eukaryotic cells there is still much to learn about many aspects of the Legionella life cycle This Research Topic highlights the latest findings regarding the biology of Legionella species their interactions with eukaryotic host cells and how the application of various technologies has increased our understanding of this important pathogen
