Team Sports Training Javier Mallo, 2020-03-10 Team Sports Training The Complexity Model presents a novel approach to team sports training examining football soccer rugby field hockey basketball handball and futsal through the paradigm of complexity Under a traditional prism these sports have been analyzed using a deterministic perspective where the constituent dimensions of the sportsmen were independently examined and treated in isolation It was expected that the body worked as a perfect machine and once all the components were maximized the sportsmen improved

their performance If the same closed recipe was applied to all the players that formed part of the squad the global team performance was expected to be enhanced As much as these reductionistic models seem coherent when contrasted in practice we see that the reality of team sports is far more different from the closed conditions in which they were idealized Team sports contain variable heterogeneous and non linear constraints which require the development of a different logic to organize their training During the last years ecological psychology the dynamical systems theory or the constraints led approach have opened interesting fields of research from which many conceptual foundations can be applied to team sports Based in this contemporary framework the current book presents the study of the players and the teams as complex systems using coordination dynamics to explain the emergence of the self organisation episodes that characterize them In addition this thinking line provides the reader with the ability to apply all these innovative concepts to their practical training scenarios Altogether it is intended to challenge the reader to re think their training strategy and to develop an original theory and practice of training specific to team sports

If You're in a Dogfight, Become a Cat! Leonard Sherman, 2017-01-10
Businesses often find themselves trapped in a competitive dogfight scratching and clawing for market share with products consumers view as largely undifferentiated Conventional wisdom suggests that dogfights are to be expected as marketplaces mature giving rise to the notion that there are bad industries where it is unlikely that any company can succeed But there are notable exceptions in which enlightened executives have changed the rules to grasp the holy grail of business long term profitable growth Rather than joining the dogfights raging within their industry companies such as Apple FedEx and Starbucks have chosen to become metaphorical cats continuously renewing their distinctive strategies to compete on their own terms In If You're in a Dogfight Become a Cat Leonard Sherman draws on four decades of experience in management consulting venture capital and teaching business strategy at Columbia Business School to share practical advice on two of the most vexing issues facing business executives why is it so hard to achieve long term profitable growth and what can companies do to break away from the pack Sherman takes the reader on a provocative journey through the building blocks of business strategy by challenging conventional wisdom on a number of questions that will redefine management best practices What should be the overarching purpose of your business Do you really know what your strategy is Is there such a thing as a bad industry Where do great ideas come from and how do I find them What makes products meaningfully different What makes and breaks great brands How and when should I disrupt my own company What are the imperatives to achieving long term profitable growth Filled with dozens of illustrative examples of inspiring successes and dispiriting falls from grace this book provides deep insights on how to become the cat in a dogfight whether you are a CEO mid level manager aspiring

business school student or curious observer interested in achieving sustained profitable growth
