

PROCEDURE AND OBSERVATIONS: EXTERNAL ANATOMY

1. Place the frog on its belly (ventral side) in the dissecting pan
2. Examine the hind legs and front legs of the frog. The hind legs are strong and muscular and are used for jumping and swimming. The forelegs provide balance and cushion the frog when it lands after jumping. Notice the difference between the toes of the hind legs and those of the front legs. How many toes are on the front legs _____. How many are on the hind legs _____. **Label the hind and front legs on Figure 1.**
3. Locate the large, bulging eyes. The frog has 3 eyelids. The 2 outer ones are the color of the frog's body. They do not move. Locate the third eyelid. It is a transparent membrane that protects the eye while permitting the frog to see under water. It is called a **NICTITATING MEMBRANE**. Label the eye and the nictitating membrane on Figure 1.
4. Behind each eye find the circular eardrum called a **TYMPANUM**. They locate the two openings into the nasal cavity. The nasal openings, are also called **EXTERNAL NARES**, found toward the tip of the snout will close when the frog is under water. **Label the mouth, tympanum, and the external nares on Figure 1.**
5. Feel the frog's skin. It is smooth, moist and thin. The frog can breathe directly through its skin as well as with its lungs. Turn the frog onto its ventral side and notice the color difference.

Why does each side's color help protect the frog from predators?

Coloration acts as camouflage
