Uncertainty quantification in nuclear physics Maria Piarulli, Evgeny Epelbaum, Christian Forssén, 2023-08-30

Inner Space/Outer Space Edward Kolb, Fermi National Accelerator Laboratory, 1986-04 Inner Space Outer Space brings together much of the exciting work contributing to a new synthesis of modern physics Particle physicists concerned with the inner space of the atom are making discoveries that their colleagues in astrophysics studying outer space can use to develop and test hypotheses about the events that occurred in the microseconds after the Big Bang and that shaped the universe as we know it today The papers collected here from scores of scientists constitute the proceedings of the first major international conference on research at the interface of particle physics and astrophysics held in May 1984 The editors have written introductions to each major section that draw out the central themes and elaborate on the primary implications of the papers that follow

Memories of a Theoretical Physicist Joseph Polchinski, 2022-05-24 A groundbreaking theoretical physicist traces his career reflecting on the successes and failures triumphs and insecurities of a life cut short by cancer The groundbreaking theoretical physicist Joseph Polchinski explained the genesis of his memoir this way Having only two bodies of knowledge myself and physics I decided to write an autobiography about my development as a theoretical physicist In this posthumously published account of his life and work Polchinski 1954 2018 describes successes and failures triumphs and insecurities and the sheer persistence that led to his greatest discoveries Writing engagingly and accessibly with the wry humor for which he was known Polchinski gives theoretical physics a very human face Polchinski famous for his contributions to string theory may have changed the course of modern theoretical physics but he was a late bloomer doing most of his important work after the age of forty His death from brain cancer at sixty three cut short a career at its peak Working on the memoir after his diagnosis using a text to speech algorithm because he could no longer read words on a page he was able to recapitulate his entire career down to the details of problems he had worked on For Polchinski physics went deeper than words This edition includes photographs from Polchinski's professional and family life as well as physics explainer boxes other technical edits and bibliographic notes by his former student Ahmad Almheiri a foreword by Andrew Strominger and an afterword by his wife Dorothy Chun and sons Steven and Daniel

Large Hadron Collider , Unsolved Problems of Noise and Fluctuations Sergey M. Bezrukov, 2003-06-02 All papers in this proceedings volume were peer reviewed The purview of this third conference was shifted toward biology and medicine Among the topics covered were the constructive role of noise in the central nervous system neuronal networks and sensory transduction hearing in humans photo and electroreception in marine animals encoding of information into nerve pulse trains single molecules and noise including single molecule detection and characterization by nanopores molecular Coulter counting concepts of noise in neurophysiology randomness and order in brain and heart electrical activities under normal conditions and in pathology the role of noise in genetic regulation and gene expression biosensors etc

Physics in Collision 19 M. Campbell, Jianming

Qian,2000 The XIX Physics in Collision conference reviewed experimental results in electroweak quantum chromodynamics neutrino bottom and rare kaon physics and updated recent developments in the area of gamma ray bursts as well as the issue of the cosmological constant and dark matter The conference opened with reports on electroweak physics A decade of precision experiments in laboratories around the world failed to uncover any significant deviations from standard model predictions Precise W boson and top quark mass measurements suggest a low mass Higgs boson in the standard model possibly within the reach of the LEP II and the upgraded Tevatron colliders These presentations were followed by a summary of the latest results on searches for Higgs and supersymmetry There were three reports on neutrino physics atmospheric solar and reactor accelerator based neutrino experiments and results Impressive Super K results strongly suggest oscillation a scenario confirmed by less precise Soudan2 and MACRO data The latest results on strange and heavy quark physics were summarized High statistics from CLEO LEP I and Tevatron have enabled experimenters to study many rare charm and bottom quark decays for the first time Among many other interesting results presented the first measurements of \sin^2 by CDF and by KTeV provide a preview of expected developments in the near future Particle Physics: Ideas and Recent Developments Jean-Jacques Aubert,Raymond Gastmans,Jean-Marc Gérard,2012-12-06 For more than 25 years the Standard Model of particle physics has withstood the confrontation with experimental results of increasing precision but this does not imply that the Standard Model can answer all questions about the ultimate constituents of nature This book presents a critical examination of the latest experimental results and confronts them with the predictions of the Standard Model Besides discussions of accelerator results from LEP HERA and the TEVATRON attention is paid to the unresolved problems of neutrino oscillations CP violation dark matter and cosmology New theoretical ideas are also analyzed in order to explore possible extensions of the standard model Realistic plans for future accelerators are presented and their physics potential is discussed paving the way for the next generation of particle physics experiments Subject-index of the Books in the Author Catalogues for the Years 1869-1895 Public Library of New South Wales. Reference Dept,1903 Gravitational Wave Detection and Data Analysis for Pulsar Timing Arrays Rutger van Haasteren,2013-09-12 Pulsar timing is a promising method for detecting gravitational waves in the nano Hertz band In his prize winning Ph D thesis Rutger van Haasteren deals with how one takes thousands of seemingly random timing residuals which are measured by pulsar observers and extracts information about the presence and character of the gravitational waves in the nano Hertz band that are washing over our Galaxy The author presents a sophisticated mathematical algorithm that deals with this issue His algorithm is probably the most well developed of those that are currently in use in the Pulsar Timing Array community In chapter 3 the gravitational wave memory effect is described This is one of the first descriptions of this interesting effect in relation with pulsar timing which may become observable in future Pulsar Timing Array projects The last part of the work is dedicated to an effort to combine the European pulsar timing data sets in order to search for gravitational waves This study has placed the most

stringent limit to date on the intensity of gravitational waves that are produced by pairs of supermassive black holes dancing around each other in distant galaxies as well as those that may be produced by vibrating cosmic strings Rutger van Haasteren has won the 2011 GWIC Thesis Prize of the Gravitational Wave International Community for his innovative work in various directions of the search for gravitational waves by pulsar timing The work is presented in this Ph D thesis

notion of economic and financial thinking before being empirically tested and anomalies are then recognized if the observed data is inconsistent with the hypothetical underpinning This is in inherent contradiction with the modeling approaches of physicists who develop their theories principle and laws after observing empirical data The awareness that physics can enlighten the understanding of human behavior and thus economics and the interest of physicists in applying their training and models to understanding the complexities of finance and economics led to the creation of a new field of study appropriately termed as Econophysics Selected Topics on Econophysics is a collection of essays on topics that enhance and enrich our understanding of economic modeling when the same rigor of modelling used by physicists is brought to developing financial and economic theories These articles include discussions on modeling bitcoins stock index modeling using geometric Brownian motion agent based modeling wealth distribution modeling as well as modeling related to fractal regression and chaotic processes This interdisciplinary book will interest researchers graduate students and professionals in the fields of economics finance as well as physics

Fiber-Based Optical Resonators Deepak Pandey,2024-01-29 After laying the foundation by explaining the fundamental principles of light propagation and optical resonators this book delves into the realm of implementing resonators through a fiber based approach It extensively explores fiber based resonators encompassing a comprehensive discussion spanning from their intricacies of design to their pivotal roles in advancing quantum optics experiments Furthermore it details the design techniques meticulously explaining the latest developments within this dynamic field There are vivid illustrations highlighting the various applications of resonators in experimental optics and cavity quantum electrodynamics Also a discourse is presented regarding the future potential of fiber based resonators in quantum technology The book serves as a valuable resource for individuals with an interest in optical resonators and their boundless possibilities
