natural disasters such as earthquakes volcanoes landslides debris flows tsunamis and floods This book covers all aspects of  
Engineering Geology and is intended to serve as a reference for practicing civil engineers and mining engineers Engineering  
Geology has also been designed as a textbook for students pursuing undergraduate and postgraduate courses in advanced  
applied geology and earth sciences A plethora of examples and case studies relevant to the Indian context have been  
included for better understanding of the geological challenges faced by engineers **Remote Sensing of Northwest**  
**Himalayan Ecosystems** R. R. Navalgund,A. Senthil Kumar,Subrata Nandy,2018-10-18 Himalaya one of the global  
biodiversity hotspots is the abode of a variety of flora and fauna The Himalayan ecosystems have immense ecological  
socioeconomic and aesthetic significance as they provide a wide range of ecosystem services The northwest Himalaya NWH  
covering three states of India viz Uttarakhand Himachal Pradesh and Jammu and Kashmir starts from the foothills of

Shivaliks in the south and extends to the greater Himalaya in the north. This region is also the source of some of the major rivers of India. With the increase in population, the NWH ecosystems have been under threat due to deforestation, loss of biodiversity, expansion of agriculture and settlement, overexploitation of natural resources, habitat loss and fragmentation, poaching, mining, construction of roads and large dams, and unplanned tourism. The Himalaya, being young and geotectonically active, remains inherently unstable, fragile, and prone to natural disasters. Climate change is also likely to impact the Himalayan cryosphere drastically. Recognizing the importance of the Himalaya, a National Mission for Sustaining the Himalayan Ecosystem, one of the eight missions under the National Action Plan on Climate Change (NAPCC) of Govt of India, to conserve biodiversity, forest cover, and other ecological values in the Himalayan region has been taken up. Spaceborne remote sensing, with its ability to provide synoptic and repetitive coverage, has emerged as a powerful tool for assessment and monitoring of the Himalayan resources and phenomena. Indian Institute of Remote Sensing, Dehradun, has taken up a number of studies in the fields of geology, water resources, forestry, agriculture, urban settlement, etc. over the last decade. The book summarises the work carried out in different disciplines, illustrated with tables and figures, and a host of relevant references. It is hoped that the book serves as an excellent reference of immense value to the students, researchers, professors, scientists, professionals, and decision makers working in the NWH region.

**Modeling In Resource Management And Environment Through Geomatics** H.S. Sharma And P.R. Binda, 2007 Mathematical Modelling in Geographical Information System, Global Positioning System and Digital Cartography Hari Shanker Sharma, Rama Prasad And P.R. Binda, 2006

Source inconnue **Water, Cryosphere, and Climate Change in the Himalayas** Ajay Kumar Taloor, Bahadur Singh Kotlia, Kireet Kumar, 2021-04-24

This edited book summarizes numerous research studies on remote sensing and GIS of natural resource management for the Himalaya region done by Indian Institutions and Universities over the last decade. It gives an overview of hydrometeorological studies on Himalayan water resources and addresses concerns in the development of water resources in this region which is dealing with an increased pressure in population, industrialization, and economic development. While the source of some of the major rivers of India are found in the Himalayas, the glaciers and water bodies in the region are continuously shrinking, leading to a depletion of water and deterioration of water quality. This is affecting a population of up to 2.5 billion people. The ecosystems have been under threat due to deforestation, loss of biodiversity, expansion of agriculture and settlement, overexploitation of natural resources, habitat loss and fragmentation, poaching, mining, construction of roads and large dams, and unplanned tourism. Spaceborne remote sensing, with its ability to provide synoptic and repetitive coverage, has emerged as a powerful tool for assessment and monitoring of the Himalayan resources and phenomena. This work serves as a resource to students, researchers, scientists, professionals, and policy makers both in India and on a global level.
