**Ahlat 2010** Roberto Bixio, Andrea De Pascale, Andrea Bixio (Computer expert), Alessandro Maifredi, Francesco Repetto, İrem Yalçın, Mauro Traverso, 2015 La quarta spedizione di ricerca sulle strutture sotterranee di Ahlat Turchia sud orientale nel 2010 si sviluppata su quattro obiettivi principali che hanno aggiunto nuove significative conoscenze sull'habitat rupestre di questa vasta area vulcanica La parziale asportazione dei sedimenti che occludono un lungo cunicolo sta rivelando un articolato reticolo ipogeo con interessanti prospettive su sviluppo funzioni e tecniche di scavo L individuazione di un quarto acquedotto sotterraneo e la probabile localizzazione della tomba di un martire cristiano del XV secolo in zone rupestri periferiche si aggiungono a ulteriori ritrovamenti nel cuore stesso dell'area archeologica un pozzo diverse cavit adibite a depositi agricoli un edificio interrato zecca una nevia iscrizioni lapidee ecc The fourth research expedition on the underground structures of Ahlat south eastern Turkey in 2010 developed on four main targets that added significant new knowledge about the rocky habitat of this wide volcanic area The partial removal of sediments that occlude a long tunnel reveal an underground complex network with interesting perspectives about development functions and excavation techniques The identification of a fourth underground aqueduct and the probable location of the tomb of a fifteenth century Christian martyr in rocky peripheral areas join to other findings in the very heart of the archaeological area a shaft many cavities used as farm storage a buried building mint a snow house tombstone inscriptions etc *Catch documentation schemes for deep-sea fisheries in the ABNJ - Their value, and options for implementation* Food and Agriculture Organization of the United Nations, 2019-04-15 This paper discusses the potential value of catch documentation schemes CDS in deep sea fisheries and the implementation aspects that have to be taken into account to ensure the effectiveness of this trade based tool to combat illegal unreported and unregulated IUU fishing The paper argues that the schemes are indeed useful for addressing IUU fishing practices known to occur in deep sea fisheries and that their adoption would improve compliance with fisheries management requirements Key infringements that could be directly detected and addressed include but are not limited to violations of closed areas harbouring protected vulnerable marine ecosystems in the deep ocean and quota overfishing The paper also establishes the notion that partial coverage of given species through a CDS at the level of regional fisheries management organizations is incongruous Given that most deep sea fisheries species have broad distributions that straddle many regional organizations the most suitable implementation model appears to be a centrally operated electronic CDS platform called a super CDS shared by a plurality of institutional and state players **Documenting El Kab**, 2024-12-12 This volume details the Oxford Epigraphic Expedition's recent work 2017 2020 2022 on the pharaonic monuments of El Kab focusing on the main rock necropolis tombs and Coptic ostraca from Hagar Edfu It includes five reports and bibliographies of earlier studies at both sites [Handbook of Measurements](#) Adedeji B. Badiru, LeeAnn Racz, 2018-10-08 Planning measuring and paying attention to details form the basis for all successful engineering operations Measurements

pervade everything we do and must be viewed from a systems perspective A comprehensive all encompassing guide to measurements Handbook of Measurements Benchmarks for Systems Accuracy and Precision focuses on high level engineering computations essential for benchmarks and technical innovation The book uses a systems framework and a technically rigorous approach to systems linking of measurements an approach that sets it apart from other handbooks The popular saying measure twice and cut once bears out the importance of measurements in human endeavors This handbook covers both qualitative and quantitative topics of measurement It opens with a chapter on the fundamentals of measurement and includes coverage of human centric measurements such as measurement of personnel productivity and contractor performance It concludes with three appendices on measurement references conversion factors equations formulas and statistics for measurement It is well understood that humans cannot manage anything that cannot be measured All elements involved in our day to day decision making involve some form of measurement whether in the kitchen retail sports service operations geographical exploration health care delivery worker productivity clothing design engineering product design or space craft launching Measuring an attribute of a system and then analyzing it against some standard some specification some best practice or some benchmark empower a decision maker to take appropriate and timely actions This book gives you a guide for sustainable practices to ensure accurate measurements helping you make decisions backed by metrics

*Encoding Visual Features by Parallel Ganglion Cell Initiated Pathways in the Healthy, Diseased and Artificial Retina* Béla Völgyi, Garrett T. Kenyon, David W. Marshak, Botir Sagdullaev, 2019-10-16 Photons are sensed by retinal photoreceptors whose matrix like distribution underlies the transformation of illumination patterns of the visual scene into photoreceptor activity patterns in a visuotopic fashion Activity of neighboring photoreceptors then are compared by secondary bipolar cells to decipher information regarding luminosity and color contrast Bipolar cells achieve this by comparing signals received directly from their center receptive field with those come from spatially offset surrounding receptive field areas mediated by inhibitory sign inverting horizontal cells This information is ultimately sent to retinal ganglion cells the output neurons of the retina In addition to the excitatory bipolar cell inputs spatial and temporal features of ganglion cell activation are robustly modified by inner retinal amacrine cells through inhibitory chemical and or excitatory electrical synaptic inputs Ganglion cells sample various bipolar cell subtypes in their dendritic field and utilize collected inputs to generate a spike output code on luminosity contrast color contrast object motion background motion motion direction changes in background illumination in a subtype specific manner Ganglion cells in each subtype cover the retinal surface economically thus collective information across the population provide a feature pattern and through time a feature movie to the brain Some of these movies are utilized for image perception whereas others are sent to accessory visual brain centers to control eye movement pupil contraction or circadian entrainment A large body of information has been revealed in the past decade regarding this field however much of the details still remain unknown or even enigmatic including i the precise description of neural circuits that

serve each ganglion cell subtype to generate a specific feature movie ii the estimation of the number of various ganglion cell subtypes that partake in image forming and non image forming signaling towards the brain iii the description of changes in the inputs morphology and signaling of retinal ganglion cells when the tissue is under stress or undergoes disease related degenerative processes iv the comparison of ganglion cell classes with those of the human retina and finally v the practical use of all the above information to establish retina inspired visual algorithms to suit computer drone and or robotic vision Therefore research articles in this issue were collected to touch upon each of these topics and highlight recent advances of the related field

**Design and Nature VI** S. Hernandez,C. A. Brebbia,2012 Throughout history many leading thinkers have been inspired by the parallels between nature and human design in mathematics engineering and other areas Today the huge increase in biological knowledge developments in design engineering systems together with the growth in computer power and developments in simulation modelling have all made possible more comprehensive studies of nature Conference topics include the following Mechanics in nature Nature and architecture Natural materials and processes Solutions from nature Biomimetics and bio inspiration Biocapacity Education in design and nature Competition in nature Biological engineering Constructional theory Locomotion in nature Gravitational biology Self sustaining environments It is these developments which have prompted the reconvening of this international conference on Design and Nature It is intended that the meeting will bring together researchers from around the world working on a variety of studies involving nature and their significance for modern scientific thought and design
