

RowCommand controls seed output

RowCommand on a Pro-Series XP row unit

RowCommand on a chain drive MaxEmerge XP row unit

Controlling input costs and improving productivity are key producer requirements today. RowCommand is an effective, integrated John Deere solution designed to meet these intensifying needs. The RowCommand system manages seed output, reduces yield drag, and improves harvest capabilities on all Pro-Shaft™ driven row units—both Pro-Series XP™ and MaxEmerge™ XP, and chain-driven MaxEmerge XP, including granular chemical attachments.

NOTE: RowCommand is only compatible on planters with 12 rows or more.

NOTE: Chain drive RowCommand is only compatible with planters equipped with pneumatic downforce systems. On planters equipped with the heavy-duty downforce springs, potential chain interference may result and is not recommended.

NOTE: Chain drive RowCommand requires some modification to brackets in order to function with corn finger pickup meters. Information on the modifications needed is found in the following sales material.

NOTE: Pro-Shaft drive RowCommand is compatible on MaxEmerge XP row units with vacuum and corn finger pick-up meters. For Pro-Series XP row units, RowCommand is compatible on vacuum meters only and is not compatible on corn finger pick-up meters. There is a select group of planters that might have Pro-Series XP row units with corn finger pick-up meters in which RowCommand will not be compatible.

NOTE: RowCommand removes half-width disconnect components from the planter.

RowCommand controls seed output by incorporating individual, low amperage clutches inside the Pro-Shaft and chain-driven gearboxes. Clutches are completely enclosed within the gearbox housing to protect them from the elements and harsh operating conditions.

When power is supplied, either manually or through Swath Control Pro™ (for the GreenStar™ 2 Display) or John Deere Section Control (for the GreenStar 3 Display), clutches disengage the seed meters and seed flow stops. Controlling seed output at individual rows reduces overplanting in point rows and maximizes seed placement when entering/exiting headlands.
