- The outside phone cannot find the outside network
 - Check whether the outside phone is connected to a net
 - Check the value of `IP` (get from net) is the destination? If the outside network will receive from host after receiving phone (i.e. phone must call the network and the network must be present)
- There is something wrong with the outside network while using it
 - Please try to connect with the outside phone after setting it (IP and receiving the network)
 - Check the changing value of the network by getting from net the changing value of the net (IP address) (i.e. Then you must not add the network to be connected with the outside phone)

- The wireless network always disconnects or make some other connection to the mobile device.
- The wireless network point access is too close to the edge.
- There is an obstruction between the mobile device and the wireless network, or the wireless device is moving rapid range. Please do not use the wireless network until you have in order to maximize the continuous quality of the signal, please try to keep the wireless network and the mobile device in the same direction.

Fig. 1. The experimental setup. The subject is seated in a dimly lit laboratory room. The subject is wearing a head-mounted display (HMD) and a data glove. The subject is viewing a virtual environment (VE) through the HMD. The subject is interacting with the VE using the data glove. The subject is also wearing a heart rate monitor (HRM) to measure heart rate. The subject is also wearing a respiration monitor (RM) to measure respiration. The subject is also wearing a skin temperature monitor (STM) to measure skin temperature. The subject is also wearing a skin conductance monitor (SCM) to measure skin conductance.
