Power System Simulation J.P. Barret,P. Bornard,B. Meyer,1996-12-31 The authors writing with the experience and technological background of Electricite de France an organisation at the forefront of simulation methods provide a comprehensive and comprehensible treatment of the modelling and simulation techniques currently in use The text emphasises model design applied to power plants producing energy generators and motors carrying out energy transformations and networks transmitting energy The systems are analysed considering each process from steady state to fast transients with detailed explanation of the problem to be solved the choice of models and methods for optimising efficiency Many examples and references are provided The book is essential reading for anyone involved in power system engineering from practising design and development engineers to researchers and postgraduate and advanced graduate students **The SAGES Manual of Fluorescence-Guided Surgery** Nova Szoka,David Renton,Santiago Horgan,2023-11-27 Fluorescence guided surgery FGS is defined as a medical imaging technique that uses a fluorescent dye or a near infrared emitting light source to identify anatomic structures during surgical procedures In 2020 alone over 1200 academic articles were published on the topic of fluorescence guidance surgery a sign that this modality is making significant inroads into surgical practice The use of near infrared imaging and FGS is a rapidly growing modality allowing surgeons to see more intraoperatively enhance surgical precision and improve surgical decision making and patient outcomes This manual provides a comprehensive state of the art review of this field and will serve as a valuable resource for clinicians surgeons and researchers with an interest in fluorescence guided surgery guiding patient management and stimulating investigative efforts After initial chapters discussing the history of FGS and the current platforms and devices it presents the most up to date data regarding the use of FGS in multiple surgical fields colorectal hepatic endocrine reconstructive pediatric among others as well as in the treatment of specific conditions such as burns Chapters are generously illustrated with full color figures and intraoperative photographs and selected chapters include video segments Access to a comprehensive resource such as this is currently limited by the relatively new inroads that fluorescence guided technology

has made into surgery The SAGES Manual of Fluorescence Guided Surgery fills this gap in the literature Manuals
