Students use the air track (https://www.khanacademy.org/a/air-track-momentum) to explore

momentum, which shows how objects' momenta change when it collides with another object.

1. Explore the air track (https://www.khanacademy.org/a/air-track-momentum) and adjust the mass and velocity of each glider. Set up each of the three collisions, and calculate the momenta before and after the collisions.

a. The gliders have the same mass but different velocities. _____

b. The gliders have the same mass and velocity but different masses. _____

c. The gliders have the same velocity but different masses and different masses. _____

2. Calculate the momenta (https://www.khanacademy.org/a/air-track-momentum) for each collision. Momentum is equal to the product of mass and velocity. If it is equal to momentum, then momentum is conserved. If it is not equal to momentum, then momentum is not conserved. Calculate the momenta for each collision.

a. When a glider is moving at the velocity of 1 m/s and the other is at rest, the velocity is 1 m/s. _____
