**Lectures on Perception** Michael T. Turvey, 2018-10-31 Lectures on Perception An Ecological Perspective addresses the generic principles by which each and every kind of life form from single celled organisms e g diatoms to multi celled organisms e g primates perceives the circumstances of their living so that they can behave adaptively It focuses on the fundamental ability that relates each and every organism to its surroundings namely the ability to perceive things in the sense of how to get about among them and what to do or not to do with them The book's core thesis breaks from the conventional interpretation of perception as a form of abduction based on innate hypotheses and acquired knowledge and

from the historical scientific focus on the perceptual abilities of animals most especially those abilities ascribed to humankind. Specifically it advances the thesis of perception as a matter of laws and principles at nature's ecological scale and gives equal theoretical consideration to the perceptual achievements of all of the classically defined kingdoms of organisms: Archaea, Bacteria, Protista, Fungi, Plantae and Animalia.
