*The Struggle to Reform Our Colleges* Derek Bok, 2017-09-05 Why efforts to improve American higher educational attainment haven't worked and where to go from here. During the first decade of this century, many commentators predicted that American higher education was about to undergo major changes that would be brought about under the stimulus of online learning and other technological advances. Toward the end of the decade, the president of the United States declared that America would regain its historic lead in the education of its workforce within the next ten years through a huge increase in the number of students earning quality college degrees. Several years have elapsed since these pronouncements were made, yet the rate of progress has increased very little, if at all, in the number of college graduates or the nature and quality of the education they receive. In *The Struggle to Reform Our Colleges*, Derek Bok seeks to explain why so little change

has occurred by analyzing the response of America's colleges the influence of students employers foundations accrediting organizations and government officials and the impact of market forces and technological innovation In the last part of the book Bok identifies a number of initiatives that could improve the performance of colleges and universities The final chapter examines the process of change itself and describes the strategy best calculated to quicken the pace of reform and enable colleges to meet the challenges that confront them

*Productivity in Higher Education* Caroline M. Hoxby, Kevin Stange, 2020-01-10 How do the benefits of higher education compare with its costs and how does this comparison vary across individuals and institutions These questions are fundamental to quantifying the productivity of the education sector The studies in *Productivity in Higher Education* use rich and novel administrative data modern econometric methods and careful institutional analysis to explore productivity issues The authors examine the returns to undergraduate education differences in costs by major the productivity of for profit schools the productivity of various types of faculty and of outcomes the effects of online education on the higher education market and the ways in which the productivity of different institutions responds to market forces The analyses recognize five key challenges to assessing productivity in higher education the potential for multiple student outcomes in terms of skills earnings invention and employment the fact that colleges and universities are multiproduct firms

that conduct varied activities across many domains the fact that students select which school to attend based in part on their aptitude the difficulty of attributing outcomes to individual institutions when students attend more than one and the possibility that some of the benefits of higher education may arise from the system as a whole rather than from a single institution The findings and the approaches illustrated can facilitate decision making processes in higher education
