Characterization of Ore-Forming Systems from Geological, Geochemical and Geophysical Studies K. Gessner, T.G. Blenkinsop, P. Sorjonen-Ward, 2018-08-07 Economically viable concentrations of mineral resources are uncommon in Earth's crust Most ore deposits that were mined in the past or are currently being extracted were found at or near Earth's surface often serendipitously To meet the future demand for mineral resources exploration success hinges on identifying targets at depth Achieving this requires accurate and informed models of the Earth's crust that are consistent with all available geological geochemical and geophysical information paired with an understanding of how ore forming systems relate to Earth's evolving structure Contributions to this volume address the future resources challenge by i applying advanced microscale geochemical detection and characterization methods ii introducing more rigorous 3D Earth models iii exploring critical behaviour and coupled processes iv evaluating the role of geodynamic and tectonic setting and v applying 3D structural models to characterize specific ore forming systems

Magnetohydrodynamic Stability of Tokamaks Hartmut Zohm,2014-12-09 This book bridges the gap between general plasma physics lectures and the real world problems in MHD stability In order to support the understanding of concepts and their implication it refers to real world problems such as toroidal mode coupling or nonlinear evolution in a conceptual and phenomenological approach Detailed mathematical treatment will involve classical linear stability analysis and an outline of more recent concepts such as the ballooning formalism The book is based on lectures that the author has given to Master and PhD students in Fusion Plasma Physics Due its strong link to experimental results in MHD instabilities the book is also of use to senior researchers in the field i e experimental physicists and engineers in fusion reactor science The volume is organized in three parts It starts with an introduction to the MHD equations a section on toroidal equilibrium tokamak and stellarator and on linear stability analysis Starting from there the ideal MHD stability of the tokamak configuration will be treated in the second part which is subdivided into current driven and pressure driven MHD This includes many examples

with reference to experimental results for important MHD instabilities such as kinks and their transformation to RWMs infernal modes peeling modes ballooning modes and their relation to ELMs Finally the coverage is completed by a chapter on resistive stability explaining reconnection and island formation Again examples from recent tokamak MHD such as sawteeth CTMs NTMs and their relation to disruptions are extensively discussed

Why Is There Philosophy of Mathematics At All? Ian Hacking, 2014-01-30 This truly philosophical book takes us back to fundamentals the sheer experience of proof and the enigmatic relation of mathematics to nature It asks unexpected questions such as what makes mathematics mathematics where did proof come from and how did it evolve and how did the distinction between pure and applied mathematics come into being In a wide ranging discussion that is both immersed in the past and unusually attuned to the competing philosophical ideas of contemporary mathematicians it shows that proof and other forms of mathematical exploration continue to be living evolving practices responsive to new technologies yet embedded in permanent and astonishing facts about human beings It distinguishes several distinct types of application of mathematics and shows how each leads to a different philosophical conundrum Here is a remarkable body of new philosophical thinking about proofs applications and other mathematical activities
