Polygons Galore Dana T. Johnson, Marguerite M. Mason, Jill Adelson, 2021-09-03 Polygons Galore is a mathematics unit for high ability learners in grades 3-5 focusing on 2-D and 3-D components of geometry by exploring polygons and polyhedra and their properties. The van Hiele levels of geometric understanding provide conceptual underpinnings for unit activities. The unit consists of nine lessons that include student discovery of properties of polygons and polyhedra, investigations for finding areas of triangles and quadrilaterals, study of the Platonic solids and real world applications of polygons and polyhedra. It also includes activities related to identifying, comparing and analyzing polygons by using properties of the polygons, constructing meanings for geometric terms, developing strategies to find areas of specific polygons, identifying and building regular and nonregular polyhedra, and recognizing geometric ideas and relationships as applied in daily life and in other disciplines such as art. Grades 3-5

Spatial Sense Makes Math Sense Catheryne Draper, 2017-12-08 *Spatial Sense Makes Math Sense: How Parents Can Help Their Children Learn* Both brings the strengths of both algebra, arithmetic and geometry into focus by showing how spatial relationships can make both make more sense. Parents will learn how to further develop and improve their child's spatial sense using visual spatial strategies of classifying, drawing, diagrams, big idea, concept building, visualizing and more. As Sawyer encourages, "Even if the pictures are not good, the effort of making them will leave lasting traces in the mind and can cause the work to be remembered." Whether you had a preference for geometry and endured algebra, loved algebra and never understood geometry, or were one of those people who never recognized a purpose for any of the math topics or, in truth, in any mathematics, this book will show parents how developing spatial sense can help visually explain both algebra and geometry relationships. You will read about Sophie Germain who believed that algebra and geometry worked hand in hand because, as she described them, algebra is written geometry and geometry is figured algebra.
