The purpose of this study is to compare first attempt HESI exit exam scores, second attempt HESI exit exam scores after remediation, and first attempt NCLEX PN pass records for 2009-2012 practical nursing graduates from a rural community college in the Upper Midwest. A retrospective descriptive correlational design was used to examine a convenience sample of practical nursing student graduates between the years of 2009-2012. Correlational analysis was conducted to determine the association between student HESI Exit Examination scores on version one, version two, and NCLEX PN success on first attempt. Stepwise analysis was used to reveal predictive accuracy of the HESI Exit Examination related to NCLEX PN outcomes. The study supported previous research that supports HESI 1 as being predictive of passing NCLEX PN on the first attempt. The results of this study will help nursing faculty determine the efficacy of HESI Exit Examinations in NCLEX PN predictions.
