

Orion® DC Motor Drive

For EQ-1C Mount

#7822

This motor drive is designed to provide electronic, hands-free tracking of celestial objects with the Orion EQ-1C equatorial mount. Electronic tracking makes objects appear to stand still in the telescope's field of view, rather than drifting due to the Earth's rotation. You won't have to reposition the telescope to re-center an object in the eyepiece as the object moves across the sky—a welcome convenience!

This motor drive is designed for use in the Northern Hemisphere only.

1. Included parts

- A Motor
- B Battery holder
- C Gear wheel
- D Gear wheel screw
- E Anchor post
- F Spring
- G Clutch cord

Refer to **Figure 1** and the parts list above to make sure all the parts are present. If anything is missing or damaged contact Orion Technical Support at www.OrionTelescopes.com/contactus.

2. Assembly

You will need two tools to install the motor drive on the mount: an adjustable wrench or a 17mm crescent wrench and a small flat-blade screwdriver.

Installing the Batteries

- The motor drive is powered by four AA alkaline batteries (not included), which you must place in the battery holder (B) prior to use (**Figure 2**). Make sure the power switch on the bottom of the battery holder is in the OFF position. Remove the battery holder cover and insert the batteries as indicated inside the battery compartment. Then slide the cover back in place.
- Remove the acorn nut adjacent to the latitude scale from the equatorial mount (**Figure 3**). Leave the latitude scale and clear washer in place.
- Thread on this anchor post (E) until tight (**Figure 4**). If the latitude scale moved when the acorn nut was removed, rotate it to the proper orientation before tightening the anchor post. The proper orientation is with the 0 degree mark pointing straight up.
- Place one end-loop of the spring (F) over the right ascension (RA) axle as shown in **Figure 5**.

Figure 1. Parts included with the motor drive.

Figure 2. Install four AA alkaline batteries in the battery holder as shown.

- Place the center hole of the gear wheel (C) on the axle (**Figure 6A**). Then insert the gear wheel screw (D) into the hole and tighten with a flat-blade screwdriver to secure the gear wheel on the axle (**Figure 6B**).
- Place the motor's (A) coupler over the anchor post, then lightly tighten the thumbscrew on the coupler (**Figure 7**).
- Now hook the free end of the spring onto the end of the clutch tab (**Figure 8**). By doing this, the small brass spur gear should contact and mesh with the larger gear wheel as shown.
- This step is optional, but if desired you can loop the clutch cord (G) around the clutch tab and tie a knot to make it a loop (see **Figure 11B**).
- Lastly, plug the cable from the battery holder (B) into the power jack on the motor (**Figure 9**).

The motor drive is now properly installed on the mount.

Geothermal Fluids Keith Nicholson, 2012-12-06 This book introduces aqueous geochemistry applied to geothermal systems It is specifically designed for readers first entering into the world of geothermal energy from a variety of scientific and engineering backgrounds and consequently is not intended to be the last word on geothermal chemistry Instead it is intended to provide readers with sufficient background knowledge to permit them to subsequently understand more complex texts and scientific papers on geothermal energy The book is structured into two parts The first explains how geothermal fluids and their associated chemistry evolve and shows how the chemistry of these fluids can be used to deduce information about the resource The second part concentrates on survey techniques explaining how these should be performed and the procedures which need to be adopted to ensure reliable sampling and analytical data are obtained A geothermal system requires a heat source and a fluid which transfers the heat towards the surface The fluid could be molten rock magma or water This book concentrates on the chemistry of the water or hydrothermal systems Consequently magma energy systems are not considered Hot dry rock HDR systems are similarly outside the scope of this text principally because they contain no indigenous fluid for study Both magma energy and HDR systems have potential as energy sources but await technological developments before they can be exploited commercially Geothermal systems based on water however are proven energy resources which have been successfully developed throughout the world **Dorete--her Book S.
