

GENERAL SAFETY RULES

Before You Start

- Familiarise yourself with these instructions paying attention to these safety rules before you use the equipment supplied. The lift towers may only be assembled and dismantled by persons familiar with these instructions.
- You will require the following Personal Protective Equipment (PPE) to help avoid personal injury from fall, Safety Glasses, Safety Shoes or Boots.
- Inspect the individual components to ensure that they are not damaged and that they function properly. Damaged components shall not be used. Only use genuine Euro Towers components with this tower. Invariant components shall not be used.
- Check the quantity of components supplied corresponds correctly to the lifting list of the tower height you are planning to build. Do not start assembly if you do not have the correct number of components. Do not use any tower that has missing or damaged parts or has not been properly assembled!
- Check the surface on where you are going to assemble the tower is clear of excessive debris and can support the weight of the tower, equipment and persons to be on the tower. Do not assemble the scaffold tower on unstable ground such as dirt paths, lawns or dirt covers or objects such as loose bricks, stones or blocks.
- Check for overhead hazards such as power lines. Do not assemble a tower near un-insulated, live or energised electrical machinery or circuits, or near machinery in operation.
- Euro Towers recommend a maximum of 2 persons to build this tower system. For taller towers you may require additional persons.
- Mobile Scaffold Towers are not designed to be lifted or suspended by a crane or any other lifting device.

Inspection, Maintenance and Transport

- Regularly inspect the individual components to ensure that they are not damaged and that they function properly. Damaged components shall not be used and shall be removed from use. Damaged components should be replaced, sent for repair or be destroyed.
- Inspect all tubes or frames, stabilisers and braces for dents, rips and holes. Damaged equipment should not be used. Check all joints for correct welds and that they are secure.
- Inspect brace hooks, check the roller works freely, and that the brace is not distorted from abuse. Check the brace is not bent out of shape.
- Inspect platforms for damage to the decking and brags, and that all lifting ladders open and close freely. Check the aluminium framework for damage and wear condition. Look out for cracked welds due to overloading. Check the hooks are not distorted from abuse.
- Inspect stabiliser couplers/lighter and can be loosened freely, ensure roller foot is in working order and not worn out. Check for adjusting pins or telescopic stabilisers are fitted and secured.
- Inspect casters, checking that the wheel turns and spins freely, that the brake engages and stops the wheel from spinning and that the wheel can be let go.
- Inspect the adjustable leg threads are clear from burrs and the nut run freely up and down the thread. Check the nut housing fits snugly in moving tubular.
- Light oil or a lubricating spray may be used to free up jammed casters, casters, adjustable leg nuts, inspection ladders and rollers.
- When transporting the components do not use excessive dragging forces when securing the load. This may distort components if not done properly.

Further information on inspection and maintenance can be found on Euro Towers Inspection Towers, for further safety information or downloading instructions call Euro Towers or visit our website.

Assembly & Dismantling

- All components should be passed up or down by hand where possible, where this is not possible use a suitable material for lifting (e.g. heavy, casted ropes) and sufficient two in a g. (three foot or better width). Do not use mechanical hoists.
- Always climb the inside of the tower using the ladders, provided tower stands up the outside at any time.
- If outside be aware of adverse weather or windy conditions. Be aware of changes to the environment in which you are using your tower that could make it unsafe.
- Do not lean ladders against the tower or stand the outside of the tower, only ascend and descend via the supplied access system from inside the tower, use the trapdoor for access.

Safety Use

- Should you require additional platform height, add further components. Never extend your adjustable legs to extreme extra height. These are for loading only. Never use a ladder or other objects on the platform to achieve additional height.
- Before use, check that all components listed have been used in the tower in the correct position.
- Be aware of imposing side loads into your tower by the work you are carrying out, such as the use of power tools or high-pressure jets. The maximum side load allowed is 200kg.
- Do not exceed the safe working load of the platform or structure by accumulating debris, material or tools on platforms as these can be a significant additional load. Loads must be evenly spread and not block trapdoors.
- It is not permissible to attach and use loading facilities on towers, unless specifically provided for by Euro Towers Ltd.
- Never climb on horizontal or diagonal braces. Do not gain access or descend from the working platform other than by the included access system. Never jump on or off platforms.
- Guards and Toeboards must be fitted on working platforms.
- It is not permissible to attach bracing sections between a scaffold tower and a building.

Stability

- Ensure that the scaffold tower is always level and the adjustable legs are engaged. Check that you have taken all necessary precautions to prevent the tower being moved or rolling away. Always apply all safety brakes or cast-brake plates.
- Ensure that the scaffold tower is within the maximum platform height as stated, and that the appropriate stabilisers are fitted.
- A scaffold tower must not be used or moved in winds stronger than 1.7 meters per second. (See table 4, 17 mph).
- If the wind speed is likely to get up to or exceed 20 mph the tower should be built to a self-adjusting structure. If no structure is available you must dismantle the tower completely before it is exposed to these strong winds.
- When moving a tower place the route, remove all persons and equipment from the tower, walk the route checking that the ground can take the weight of the tower and taking out for obstructions and hazards on the ground and overhead. If you have any doubt about the route dismantle the tower and re-assemble in the new required location.
- To move a tower safely, adjust the top clamp of the stabilisers and lift the rubber feet no more than 20mm from the ground, release the friction wheels and push the tower at normal walking speed to the required position. Once in position reapply brakes, level tower and reposition all stabiliser feet to ensure firm contact with the ground. The maximum height you can move a tower is 4.2m platform.
- Ballast weights can be used where it is not possible to fit the required stabilisers. They must be solid materials and cannot be granular in liquid. They must be secured to the tower and placed on the ground as possible. They can be on extra platforms, stabilisers or ballast weights may be used when stated in the list. For further information on the use of Ballast Weights contact your supplier or Euro Towers Ltd.
