Linguistic Research and Language Teaching and Learning Hongyin Tao, 2016-10-03

Linguistic research and language teaching have generally been viewed as two separate types of academic endeavor. While linguists have been preoccupied with pattern finding and theory building, language teachers often encounter issues that are not readily addressed by theoretical linguistic research. This collection with eleven papers touching upon a wide range of issues stands out as one of the rare concerted efforts toward a meaningful integration of the two endeavors. Subject matters include tone stress, word structure, grammatical categories, e.g., classifiers, syntactic structures including argument structure, discourse particles, implicit and explicit knowledge, conversational repair, and learner corpus. With a diverse range of theoretical orientations, this collection serves to showcase some of the productive ways to create synergy between Chinese linguistic research and language education.

The Semantics of Chinese Classifiers and Linguistic Relativity Song Jiang, 2017-06-26. The Semantics of Chinese Classifiers and Linguistic Relativity focuses on the semantic structure of Chinese classifiers under the cognitive linguistics framework and the implications thereof on linguistic relativity and language acquisition. It examines the semantic correlation between a given classifier and its associated nouns. Nouns in Chinese which are assigned specific classifiers according to their selected characteristics reflect the process of human categorization. The concrete categories formed by the relationship between nouns and classifiers may serve to explain the conceptual structure of the Chinese language and certain underlying aspects of culture and human cognition. Song Jiang is Assistant Professor of Chinese for the Department of East Asian Languages and Literatures at the University of Hawai'i at Mānoa.

PSYCHOLINGUISTICALLY APPROACHING TRILINGUALS Xiaowen Ji, 2024-06-24 This book studies Dutch-English-Mandarin trilinguals to answer research questions about trilinguals' mental lexicon representation, pattern routes for L3 conceptual access, and the role of instruction language herein. To gain scientific and reliable results, interviews, questionnaires, and experiment series were all adopted for different purposes. Besides this study, it compares trilinguals with lower and higher L3 levels to map the developmental trajectories of trilinguals' mental lexicon representation and L3 conceptual access. The current research proposes a three-stage hypothesis and a parabola-shaped model to explain the role of L2 as instruction language throughout L3 learning process and its contrast with the role of L1. Moreover, Trilinguals All Connected Models of mental lexicon representation and L3 conceptual access are the first attempts to give detailed descriptions of trilinguals' mental lexicon representation and L3 conceptual access from both static and developmental perspectives. Furthermore, it sheds light on foreign language teaching and learning practice and contributes to further improving overseas Chinese language teaching and culture spreading performances, thus fulfilling its theoretical, methodological, and practical values.
