makes op amps popular building blocks for circuit design Op amps are among the most widely used electronic devices today being used in a vast array of consumer industrial and scientific devices Many standard IC op amps cost only a few cents in moderate production volume however some integrated or hybrid operational amplifiers with special performance specifications may cost over 100 US in small quantities Op amps may be packaged as components or used as elements of more complex integrated circuits The op amp is one type of differential amplifier Other types of differential amplifier include the fully differential amplifier similar to the op amp but with two outputs the instrumentation amplifier usually built from three op amps the isolation amplifier similar to the instrumentation amplifier but with tolerance to common mode voltages that would destroy an ordinary op amp and negative feedback amplifier usually built from one or
