Intel PAM continues to grow and mature as a venue for research in all aspects of Internet measurement. This trend is being driven by increasing interest and activity in the field of Internet measurement. To accommodate the increasing interest in PAM, this year the workshop added a Steering Committee whose members will rotate to provide continuity and oversight of the PAM workshop series. PAM plays a special role in the measurement community. It emphasizes specific relevant research in the area of network and Internet measurement. Its focus reflects the increasing understanding that measurement is critical to effective engineering of the Internet's components. This is clearly a valuable role as evidenced by the yearly increases in the number of submissions, interest in, and attendance at PAM. PAM received 84 submissions this year. Each paper was reviewed by three or four Program Committee (PC) members during the first round. Papers that received conflicting scores were further reviewed by additional PC members or external reviewers, typically two. After all reviews were received, each paper with conflicting scores was discussed extensively by its reviewers until a consensus was reached. The PC placed particular emphasis on selecting papers that were fresh and exciting research contributions. Also, strong preference was given to papers that included validation results based on real measurements.
