automotive technology with specific reference to battery electric hybrid electric and fuel cell electric vehicles. It could serve electrical engineers who need to know more about automobiles or automotive engineers who need to know about electrical propulsion systems. For example, this reviewer who is a specialist in electric machinery could use this book to better understand the automobiles for which the reviewer is designing electric drive motors. An automotive engineer on the other hand might use it to better understand the nature of motors and electric storage systems for application in automobiles, trucks or motorcycles. The early chapters of the book are accessible to technically literate people who need to know something about cars. While the first chapter is historical in nature, the second chapter is a good introduction to automobiles including dynamics of propulsion and braking. The third chapter discusses in some detail spark ignition and compression ignition Diesel engines. The fourth chapter discusses the nature of transmission systems. James Kirtley, Massachusetts Institute of Technology, USA. The third edition covers extensive topics in modern electric hybrid electric and fuel cell vehicles in which the profound knowledge, mathematical modeling, simulations and control are clearly presented. Featured with design of various vehicle drivetrains as well as a multi-objective optimization software, it is an estimable work to meet the needs of automotive industry. Haiyan Henry Zhang, Purdue University, USA. The extensive combined experience of the authors has produced an extensive volume covering a broad range but detailed topics on the principles, design and architectures of Modern Electric Hybrid Electric and Fuel Cell Vehicles in a well-structured, clear and concise manner. The volume offers a complete overview of technologies, their selection, integration, control as well as an interesting Technical Overview of the Toyota Prius. The technical chapters are complemented with example problems and user guides to assist the reader in practical calculations through the use of common scientific computing packages. It will be of interest mainly to research postgraduates working in this field as well as established academic researchers, industrial R & D engineers and allied professionals. Christopher Donaghy, Sparg, Durham University, United Kingdom. The book deals with the fundamentals, theoretical bases and design methodologies of conventional internal combustion engine (ICE) vehicles, electric vehicles (EVs), hybrid electric vehicles (HEVs) and fuel cell vehicles (FCVs). The design methodology is described in mathematical terms, step by step, and the topics are approached from the overall drive train system, not just individual components. Furthermore, in explaining the design methodology of each drive train design, examples are presented with simulation results. All the chapters have been updated, and two new chapters on Mild Hybrids and Optimal Sizing and Dimensioning and Control are also included. Chapters updated throughout the text. New homework problems, solutions and examples. Includes two new chapters. Features accompanying MATLAB™ software.
