IBP, Inc., MANAGERIAL ECONOMICS YOGESH MAHESHWARI,2012-09-27 For courses in managerial economics this textbook now in its third edition is specifically designed for the students of management commerce and economics to provide them with a thorough understanding of economic concepts and methodologies and the economic environment influencing managerial decisions The book first lays a sound theoretical foundation of basic concepts definitions and methodologies of economics being an essential prerequisite for students to understand the theory of managerial economics All the basic principles are introduced with mathematical complexity kept to minimum essentials of applied mathematics needed for

comprehending the underlying ideas of models and theories of economics are covered. The book then moves on to systematically enumerate the various tools of analysis such as demand analysis, cost analysis, elasticity of demand, production analysis, and price theory, and highlights their importance in managerial decision making through the concept example format wherein a concept discussed is immediately followed by a practical situation so that the reader can understand its application. The end of chapter questions reinforce a deeper understanding of the concepts introduced in the text. An exclusive chapter on linear programming emphasizes the importance of this mathematical tool in finding optimal business solutions. The book concludes with an exhaustive introduction to macroeconomics analyzing in depth the concepts of inflation, income, savings, and investments, and growth and employment in Indian context. New to the Third Edition: Revised and expanded coverage of evolution of economic thought and basic economic terms; An enriched inclusion of demand forecasting techniques and the Cobb-Douglas production function; An extensive illustration of the commonly used pricing methods and market power; Value addition to the existing list of case studies to enhance students' understanding of the theoretical concepts.

Applications of Operational Research in Business and Industries Angappa Gunasekaran, Jai Kishore Sharma, Samarjit Kar, 2023-05-21

Effective decision making while trading off the constraints and conflicting multiple objectives under rapid technological developments, massive generation of data, and extreme volatility is of paramount importance to organizations to win over the time-based competition today. While agility is a crucial issue, the firms have been increasingly relying on evidence-based decision making through intelligent decision support systems driven by computational intelligence and automation to achieve a competitive advantage. The decisions are no longer confined to a specific functional area. Instead, business organizations today find actionable insight for formulating future courses of action by integrating multiple objectives and perspectives. Therefore, multi-objective decision making plays a critical role in businesses and industries. In this regard, the importance of Operations Research (OR) models and their applications enables the firms to derive optimum solutions subject to various constraints and/or objectives while considering multiple functional areas of the organizations together. Hence, researchers and practitioners have extensively applied OR models to solve various organizational issues related to manufacturing, service, supply chain, and logistics management, human resource management, finance, and market analysis, among others. Further, OR models driven by AI have been enabled to provide intelligent decision support frameworks for achieving sustainable development goals. The present issue provides a unique platform to showcase the contributions of the leading international experts on production systems and business from academia, industry, and government to discuss the issues in intelligent manufacturing, operations management, financial management, supply chain management, and Industry 4.0 in the Artificial Intelligence era. Some of the general but not specific scopes of this proceeding entail OR models such as Optimization and Control, Combinatorial Optimization, Queuing Theory, Resource Allocation Models, Linear and Nonlinear Programming Models, Multi-objective and multi-attribute Decision Models, Statistical Quality Control, along with AI, Bayesian Data Analysis, Machine
