

- **Freeboard**  
The freeboard (see Figure 8.14) defines a critical water level (Invert level- Freeboard) at the connection node in the pipe network below which the defined DQ relation apply. For submerged and reverse flow (surcharge), the transfer capacity of the connection reverts to a standard orifice relationship.

Figure 8.14 Freeboard detail in a Curb Inlet

The freeboard describes the distance (depth) from the Grade Invert Level to the Critical Water Level (i.e.  $\text{Freeboard} = \text{Grade Invert Level} - \text{Critical Water Level}$ ). The Critical Water Level is the level above which the basin is considered to be 'drowned' such that the DQ relationship for transferring water from the surface to the node no longer applies. For submerged and reverse flow conditions the exchange of water across the coupling reverts to a standard orifice equation.

**Approaches to Water Sensitive Urban Design** Potential Design Ecological Health Economics Policies and Community Perceptions covers all aspects on the implementation of sustainable storm water systems for urban and suburban areas whether they are labeled as WSUD, Low Impact Development, LID, Green Infrastructure, GI, Sustainable Urban Drainage Systems, SUDS, or the Sponge City Concept. These systems and approaches are becoming an integral part of developing water sensitive cities as they are considered very capable solutions in addressing issues relating to urbanization, climate change, and heat island impacts in dealing with storm water issues. The book is based on research conducted in Australia and around the world, bringing in perspectives in an ecosystems approach, a water quality approach, and a sewer-based approach to stormwater, all of which are uniquely covered in this single resource. Presents a holistic examination of the current knowledge on WSUD and storm water, including water quality, hydrology, social impacts, economic impacts, ecosystem health, and implementation guidelines. Includes additional global approaches to WSUD, including SUDS, LID, GI, and the Sponge City Concept. Covers the different perspectives from Australia, ecosystem-based, the USA, water quality-based, and Europe, sewer-based. Addresses storm water management during the civil construction stage when much of the ecological damage can be done.
