

Circulatory Systems

Answer Key

Background: cellular respiration, blood vessel, pathway, pulmonary system, heart, plasma, pulmonary artery, pulmonary vein, capillary wall, vein, ventricle, ventricle, blood cell

Pre-Knowledge Questions (Answers are in the following questions)

1. Why is pulmonary circulation important?
Pulmonary circulation carries deoxygenated blood from the heart to the lungs, where it is oxygenated. It then carries the oxygenated blood back to the heart.

2. What is the general flow of blood through your body? (circulation)

Class Activity:
Illustrate the general flow of blood through the heart and lungs. Label the heart, pulmonary artery, pulmonary vein, and the lungs.

3. How many chambers does the heart have?
The heart has four chambers: two atria and two ventricles. The right atrium and right ventricle are on the right side, and the left atrium and left ventricle are on the left side. The right ventricle pumps blood to the lungs, and the left ventricle pumps blood to the rest of the body.

4. How do valves inside the heart affect the process of blood circulation?
Valves prevent blood from flowing back in the opposite direction. They ensure that blood flows in one direction through the heart.

5. Illustrate the flow of blood within the heart. How does the flow of blood in the heart affect the process of circulation? (Label the heart and the pulmonary system.)
a. Blood circulates clockwise during each cycle.
b. Blood circulates counter-clockwise during each cycle.

6. Compare why the right ventricle has a thicker wall than the left ventricle and how this affects the flow of blood.
The right ventricle has a thinner wall than the left ventricle because it pumps blood to the lungs, which are close to the heart. The left ventricle has a thicker wall because it pumps blood to the rest of the body, which is further away from the heart.
