Multiple Criteria Decision Making in Supply Chain Management A. Ravi Ravindran, 2017-07-12 Supply chain management decisions are made under the conflicting criteria of maximizing profit and customer responsiveness while minimizing supply chain risk. Multiple Criteria Decision Making in Supply Chain Management provides a comprehensive overview of multi-criteria optimization models and methods that can be used in supply chain decision making. Presenting the contributions of internationally known authors, researchers, educators, and practitioners, this new book in the Operations Research Series provides readers with a single source guide to recent developments in this area. The focus of the book is on the design and operation of the supply chain system which involves connecting many production and distribution systems often across wide geographic distances in such a way that the businesses involved can ultimately satisfy the consumer demand as efficiently as possible, resulting in maximum financial returns to those businesses connected to that supply chain system. The book includes several case studies on the design and operation of supply chain networks in manufacturing and healthcare. Stem Cell Banking Dusko Ilic, 2014-05-05 This book exemplifies experience across the globe in banking of cord blood mesenchymal embryonic and induced pluripotent stem cells for clinical use from the United States, Canada, the European Union, Switzerland, and Japan to Iran, India, and Serbia. The concerns are similar regardless of stem cell type or origin. Implementing core values and common standards depend often on specific circumstances of political and economic setting which makes flexibility as important as systematic planning. Banking of stem cells is not just building a repository and storing samples. The planning, design, construction, and maintenance involve multiple skilled professionals. Stem cell banks are points where technology and medicine converge with ethics, laws, and regulations. If properly designed and organized, their utilization will have a broad impact not only on the scientific community and medical professionals but also on the general public. **2012-2013 College Admissions Data Sourcebook West Edition**, 2012-2013 College Admissions Data Sourcebook Northeast Edition, **Current and Future Worldwide Threats to the National Security of the United States** United States Congress, Senate, Committee on Armed Services, 2015 2012-2013 College Admissions Data Sourcebook Midwest Edition, Independent Schools Yearbook 2012-2013 none, 2013-06-20 The highly respected book of reference sought after by Independent Schools in membership of the Independent Schools Council's Associations: HMC, GSA, The Society of Heads, IAPS, ISA, and COBIS. knowledge and skills that is both powerful and useful Foreword by Paul A Kirschner Given the choice who wouldn't want to be cleverer What teacher wouldn't want this for their students and what parent wouldn't wish it for their children When David started researching this book he thought the answers to the above were obvious But it turns out that the very idea of measuring and increasing children's intelligence makes many people extremely uncomfortable If some people were more intelligent where would that leave those of us who weren't The question of whether or not we can get cleverer is a crucial one If you believe that intelligence is hereditary and environmental effects are trivial you may be sceptical But environment does matter and it matters most for children from the most socially disadvantaged backgrounds those who not only have the most to gain but who are also the ones most likely to gain from our efforts to make all kids cleverer And one thing we can be fairly sure will raise children's intelligence is sending them to school In this wide ranging enquiry into psychology sociology philosophy and cognitive science David argues that with greater access to culturally accumulated information taught explicitly within a knowledge rich curriculum children are more likely to become cleverer to think more critically and subsequently to live happier healthier and more secure lives Furthermore by sharing valuable insights into what children truly need to learn during their formative school years he sets out the numerous practical ways in which policy makers and school leaders can make better choices about organising schools and how teachers can communicate the knowledge that will make the most difference to young people as effectively and efficiently as possible David underpins his discussion with an exploration of the evolutionary basis for learning and also untangles the forms of practice teachers should be engaging their students in to ensure that they are acquiring expertise not just consolidating mistakes and misconceptions There are so many competing suggestions as to how we should improve education that knowing how to act can seem an impossible challenge Once you have absorbed the arguments in this book however David hopes you will find the simple question that he asks himself whenever he encounters new ideas and initiatives Will this make children cleverer as useful as he does Suitable for teachers school leaders policy makers and anyone involved in education
