 educational strengths and weaknesses of mediated content including media as a learning supplement in comparison to
 traditional face to face learning Each chapter includes research on and a broad brush summary of approaches to combining
 life sciences education with educational technologies The chapters are organized into four main sections each of which
 focuses on a key question regarding the consequences of incorporating media into education In this regard the authors
 highlight how educational technology is both a bridge and barrier to student access and inclusivity Further they address the
 ongoing discussion as to whether students need to be present for lectures and on how having agency in their own learning
 can improve both retention and conceptual understanding To link the content to current events the authors also shed light on
 the impact that the COVID 19 pandemic is having on the continuity of educational programs and on the growing importance
 of educational technologies Consequently the book offers life science educators valuable guidance on the technologies

Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the

implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
