

Topic 2: Chemical Change (P 114-129)

Unit 1: Physical & Chemical Change

- Physical change = change in matter that can be reversed.
- 2 substances that are mixed and can be separated by physical means.
- E.g. solid water (ice) is arranged in crystal lattice.
 - Heat breaks the lattice - transforming it into liquid water and gas (water vapor).
 - Atoms in water remain bonded due to strong forces.
- Chemical change = changing something so that it can't be changed back to its original state.
- E.g. heating iron and sulphur together creates a brown, sticky substance called iron sulphide (FeS).
 - This new substance has different properties from the old one (FeS isn't magnetic).
 - Heating sulphur with iron causes atoms to break apart and rejoin in a strong chemical bond - new lattice formed.

- Chemical changes require more energy than physical ones.

Physical Change	Chemical Change
Easy to reverse.	Difficult to reverse.
No new chemical substances form.	New chemical substances form.
Require small amounts of energy.	Require large amounts of energy.

Unit 2: Conservation of Atoms During Chemical Change

Law of Conservation of Matter

- No. of atoms doesn't change when a chemical reaction occurs.
- No. molecules may change.
- Law of conservation of matter = mass of reactants and mass of products stays the same.

Law of Constant Proportions

- Law of constant proportions = a chemical compound always contains the same elements in fixed proportions by mass.
- E.g. CO_2 :
 - Relative atomic mass of carbon = 12.
 - Relative atomic mass of oxygen = 16 (2 oxygen atoms required in CO_2).
 - Total relative atomic mass of CO_2 is $12 + 16 + 16 = 44$.

- Ratio of carbon to oxygen remains constant - any mass of CO_2 will be $\frac{12}{44}$ carbon and $\frac{32}{44}$ oxygen.
- Ratio of mass of carbon to oxygen is always 12:32 or 3:8 in any amount of CO_2 , irrespective of how it is formed.

Unit 3: Representing Chemical Change

Balanced Chemical Equations

- Chemical change is represented by chemical equations.
- Substances on the left of the arrow = reactants.
- Substances on the right of the arrow = products.

government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves. The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8. Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district. Comparatively little has been written about the measurement of achievement in the other grades and subjects. This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all. It addresses traditional end of course tests as well as alternative measures such as portfolios, exhibitions and student learning objectives. In each case, issues related to design and development, psychometric considerations and validity challenges are covered from both a generic and a content specific perspective. The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment. Edited by leading experts, these books are comprehensive and practical resources on the latest developments in the field.
