Thus we are interested in the full range of mental processes modulated or modified by expertise from simple object or pattern recognition to complex decision making or problem solving in a particular domain These domains can range from everyday or occupational expertise to sports and rather artificial domains such as board games In all cases the aim should be to elucidate how the brain implements these sometimes incredible feats We are particularly interested in connecting cognitive theories about expertise and expertise related performance differences with models and data on the neural implementation of expertise We welcome original research contributions using the full range of behavioural neuroscience methods as well as theoretical methodological or Introduction to Physical Education, historical reviews and opinion papers focusing on any of the above mentioned aspects Fitness, and Sport Daryl Siedentop, Hans Van Der Mars, 2022-06-06 The ninth edition of Introduction to Physical Education Fitness and Sport is as robust and instrumental as ever for students preparing for careers in the various physical activity fields And the latest version of this long running and seminal text is chock full of new material for budding teachers coaches fitness professionals recreation leaders and program leaders This book covers a broad spectrum of careers and professions
