In this practical, you will use several indicators to test for the presence of nutrients in solutions.

INSTRUCTIONS:

- You will perform **FOUR different tests** on **TWO** experimental samples.
- Each test will use a different **indicator reagent** that will change colour in the presence of the particular organic compound that is being tested for.
- As part of the experimental method, you must include **control samples** to insure the validity of your results.

A **negative control** will result in no change in colour. It will either contain no sample at all or it will contain a nonreactive sample like water.

A **positive control** will result in a colour change indicating the presence of the compound you are testing for.
