Bandwidth Recovery Cia Verschelden, 2024-11-13 *Bandwidth Recovery* explores how students' cognitive resources are diminished by persistent economic insecurity, childhood trauma, and marginalization while offering strategies and interventions to help learners regain the bandwidth they need to succeed in college. When college students feel like they don't belong or are fearful, uncertain, or otherwise prevented from being their authentic selves, much of the mental bandwidth needed for learning is not available. When they are food insecure, financially unstable, or coping with the effects of childhood trauma, cognitive capacity is likewise diminished. Beginning with analysis of the most up-to-date research on the mental and physical impact of poverty, racism, and other forms of social marginalization, Cia Verschelden presents vetted approaches for promoting a growth mindset and self-efficacy in students. Readers will learn to develop supports that build upon students' values and prior knowledge with the goal of creating a sense of belonging and community both in and out of the classroom. New to this edition are updated terminology and discussions of neurodiversity, childhood trauma, economic inequality, and the ongoing effects of the COVID pandemic. This book is intended for all higher education faculty, student affairs professionals, administrators, and scholars interested in creating learning environments where every student has the chance to succeed.

How Shanghai Does It Xiaoyan Liang, Huma Kidwai, Minxuan Zhang, Yinan Zhang, 2016-04-08 The Shanghai basic education system has garnered significant attention since its extraordinary performance in the 2009 and 2012 Programme for International Student Assessment (PISA), a global assessment of 15-year-olds' educational abilities. Among the 65 participating economies in 2012, Shanghai, China, ranked first on all three major domains of PISA: i.e. mathematics, reading, and science. Shanghai also stands out for having the world's highest percentage of resilient students: students from socio-economically disadvantaged backgrounds who emerge as top performers. Shanghai's PISA story has generated intense discussions and diverse speculations in the field of international educational development, and numerous studies have been done in the attempt to unravel the mystery. Missing from the picture, however, is a more comprehensive, systematic, in-depth, and objective rendition of the policies and practices of Shanghai basic education benchmarked against others in key dimensions. This report presents an in-depth examination of how Shanghai scored highest in the areas of reading, science, and mathematics on PISA. It documents and benchmarks key policies in basic Shanghai education, provides evidence on the extent

to which these policies have been implemented in schools and explores how these policies have affected learning outcomes The report uses PISA 2012 data to analyze Shanghai student achievement variation and to examine the extent school variables may be associated with the variation beyond family and student background It also uses the World Bank's Systems Approach for Better Education Results SABER an existing systems diagnostic and benchmarking tool as an organizing framework and for data collection School based surveys and other existing research shed further light on educational impact and implementation While the report attempts to adopt a systems approach particular emphasis is placed on teachers education financing balancing autonomy and accountability and student assessment
