

THE SCIENCE OF BIOLOGY

1.1 The Methods of Science

What is the science of Biology?

- ✓ **Biology is the science of life and all living things from unicellular bacteria to multicellular organisms.**
- ✓ **Biology comprises several branches of study dealing with wide ranges of sciences. For example**
 - **Astrobiologist** - try to find evidences of life on other planets.
 - **Biomedical researchers** – dealing with the development of new drugs and vaccines
 - **Microbiologist** - engage in all forms of microorganism life and their functions.
 - **Paleobiologists** – biologists engaged in finding out the way how life began on earth and how the present complex life forms evolved from simple life form by using evidences from fossils and chemistry of ancient rocks.

What is science?

- ✓ Science is a unique system of acquiring knowledge using scientific method. Both research types (applied research and basic research/experimental research) generate scientific knowledge by using scientific methods. Discuss how Gregor Mendel and Issac Newton formulated the law of inheritance and the law of gravitation respectively.
- ✓ Scientists first suggest possible explanations for new or existing phenomena, and, then collect evidences to prove or disprove their suggested explanations by using specific approach called scientific method.

Scientific Method

- ✓ It is an approach or process by which scientists test their suggested explanations. Ancient people use observation to explain events around them without testing their ideas. The commonest example is "*the theory of spontaneous generation of life*", which suggest that non-living objects can give rise to living organism.

Example 1- the large number of frogs in the Nile Delta of Egypt during spring was believed to be created from the muddy soil itself.

Example 2: The creation of flies from decayed meat

Steps of scientific method

The major steps in a scientific method are the following.

- Ask question / Identification of problems
- Do background research
- Formulate hypothesis
- Design and conduct an experiment test the hypothesis

D. Walker,D. Christopher Brooks,Kem Saichaie,Christina I. Petersen,2023-07-03 While Active Learning Classrooms or ALCs offer rich new environments for learning they present many new challenges to faculty because among other things they eliminate the room s central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed The importance of learning how to use these classrooms well and to capitalize on their special features is paramount The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the learning process in a manner different from traditional classrooms and lecture halls This book provides an introduction to ALCs briefly covering their history and then synthesizing the research on these spaces to provide faculty with empirically based practical guidance on how to use these unfamiliar spaces effectively Among the questions this book addresses are How can instructors mitigate the apparent lack of a central focal point in the space What types of learning activities work well in the ALCs and take advantage of the affordances of the room How can teachers address familiar classroom management challenges in these unfamiliar spaces If assessment and rapid feedback are critical in active learning how do they work in a room filled with circular tables and no central focus point How do instructors balance group learning with the needs of the larger class How can students be held

accountable when many will necessarily have their backs facing the instructor How can instructors evaluate the effectiveness of their teaching in these spaces This book is intended for faculty preparing to teach in or already working in this new classroom environment for administrators planning to create ALCs or experimenting with provisionally designed rooms and for faculty developers helping teachers transition to using these new spaces **Resources in Education** ,2001-10
