

Population Growth

How fast do populations grow?

1. Which dependent of growth is graphed, the trend line or carrying capacity? What is the rest of the equation?

$\rightarrow$ Equation 1.2

2. Which has a greater effect: potential - numbers or time? Why?

Time has greater effect potential because time is a more limiting factor than potential

3. What is carrying capacity?

Carrying capacity is the maximum number of individuals a given environment can support

4. What are the two types of limiting factors and how do they differ?

1. density dependent (biotic factors) - density dependent factors are those that increase in effect as the density of the population increases. Examples include competition for food, disease, predation, and parasitism. 2. density independent (abiotic factors) - density independent factors are those that affect a population regardless of its density. Examples include natural disasters, climate, and human activities.

5. Which limiting factors exhibit pressure on a population, what happens to the growth graph?

Limiting factors exhibit pressure on a population, which causes the growth graph to level off. This is because the population reaches a carrying capacity, which is the maximum number of individuals that the environment can support.
