

Submersible Pump Installation

The diagram illustrates the components and installation of a submersible pump system. A detailed inset shows the pump assembly with the following labeled parts:

- 4 Pressure Tank**: A blue cylindrical tank that stores water under pressure.
- 6 Pressure Switch**: A device that controls the pump's operation based on water pressure.
- Disconnect Switch/Circuit Breaker**: An electrical safety component.
- Control Box**: The main electrical control unit for the pump.
- Pressure Gauge**: A device to monitor the system pressure.
- Drain Valve**: A valve for draining the tank.
- Check Valve (Where total codes stop)**: A valve that prevents backflow.
- 7 Tank Tee**: A fitting used to connect the pressure tank to the main line.
- 8 Sampling Valve**: A valve used for taking water samples from the tank.

The main installation diagram shows the pump assembly within a well casing, with the following components labeled:

- 3 Well Cap**: The top cover of the well.
- 2 Pitless Adapter**: A device that allows the drop pipe to pass through the well casing without the need for a pit.
- 1 Check Valve**: A valve that prevents water from flowing back into the well.
- Tape Cable to Pipe**: A cable used to secure the drop pipe.
- Submersible Cable**: The cable that powers the pump.
- Torque Arrestor**: A device that prevents the pump from rotating.
- Coupling**: A device that connects different sections of the drop pipe.
- Check Valve**: A valve that prevents backflow at the pump intake.

Well Seal - Seals off the well from the environment on top and allows for drop pipes and wires to go through. There is a rubber compression section in between two cast iron or plastic ends. When tightened, the rubber forms the seal inside the casing. They also support the weight of the drop pipe and the pump.

- 1 Check Valve** - Used to keep the water from flowing back into the well. A check valve will hold pressure on one side and vacuum on the other; as long as there is a watertight system there shouldn't be any air in the lines. If air leaks in, water can leak out, and vice-versa.
- 2 Pitless Adapter** - In colder climates the drop pipe needs to leave the casing at some point below the freeze level; a pitless adapter accomplishes that. It goes through the casing while the pump and drop pipe hang on it.
- 3 Well Cap** - Used in conjunction with a pitless adapter to cover the top of the well.
- 4 Pressure Tank** - Provides storage of water under pressure for delivery between cycles; allows for reserve capacity for periods of peak demand; protects and extends the life of the pump by reducing the number of on/off cycles; and helps reduce overall system maintenance.
- 5 Pressure Relief Valve** - Every installation MUST have a pressure relief valve to prevent tank rupture! Provides insurance if pressure switch fails. Relieves pressure in system before bursting the tank.
- 6 Pressure Switch** - Critical to the smooth operation of the system. As water pressure increases (from the pump filling a tank), a diaphragm in the pressure switch applies force to a spring loaded lever. As the pressure overcomes the spring tension, the contacts snap open interrupting the electrical circuit stopping the pump. The greater the spring pressure, the higher the pump ON/OFF settings.
- 7 Tank Tee** - Is used at the tank and is tapped to allow for mounting of the switch and gauge in an orderly manner.
- 8 Sampling Valve** - Hose bibbs, etc. Used for taking water samples at the water tank.
