Neurorobotics Tiffany J. Hwu,Jeffrey L. Krichmar,2022-11-29 An introduction to

neurorobotics that presents approaches and design principles for developing intelligent autonomous systems grounded in biology and neuroscience. Neurorobotics is an interdisciplinary field that draws on artificial intelligence, cognitive sciences, computer science, engineering, psychology, neuroscience, and robotics. Because the brain is closely coupled to the body and situated in the environment, neurorobots (autonomous systems modeled after some aspect of the brain) offer a powerful tool for studying neural function and may also be a means for developing autonomous systems with intelligence that rivals that of biological organisms. This textbook introduces approaches and design principles for developing intelligent autonomous systems grounded in biology and neuroscience. It is written for anyone interested in learning about this topic and can be used in cognitive robotics courses for students in psychology, cognitive science, and computer science. Neurorobotics covers the background and foundations of the field with information on early neurorobots, relevant principles of neuroscience, learning rules and mechanisms, and reinforcement learning and prediction. Neurorobot design principles grounded in neuroscience and principles of neuroscience research and examples of neurorobots for navigation, developmental robotics, and social robots are presented with the cognitive science and neuroscience background that inspired them. A supplementary website offers videos, robot simulations, and links to software repositories with neurorobot examples.

Wanted Amanda Abraham, 2025-05-24. By whom? And for what? Evelyn Holtz is an emerging columnist with a difficult past. Desperate to find answers, she's left with no choice but to face the largest, most complex challenge of her life. Little does she know who's standing behind her or more frighteningly, who's standing against her. Her only motives are the questions swirling through her mind; those thoughts she can't shake. With the future of her column on the line, she takes the risk. The transformation begins.

It Keeps Me Seeking Andrew Briggs, Hans Halvorson, Andrew Steane, 2018-09-02. Here is a fresh look at how science contributes to the bigger picture of human flourishing through a collage of science and philosophy richly illustrated by the authors' own experience and personal reflection. They survey the territory of fundamental physics, machine learning, philosophy of human identity, evolutionary biology, miracles, arguments from design, naturalism, the history of ideas, and more. The natural world can be appreciated not only for itself but also as an eloquent gesture, a narrative, and a pointer beyond itself. Our human journey is not to a theorem or a treatise but to a meeting which encompasses all our capacities. In this meeting, science is the means to find out about the structure of the physical world of which we are a part, not a means to reduce ourselves and our fellow human beings to mere objects of scrutiny and still less a means to attempt the utterly futile exercise of trying to do that to God. We have intellectual permission to be open to the notion that God can be trusted and known. The material world encourages an open-hearted reaching out to something more, with a freedom to seek and to be received by what lies beyond the scope of purely impersonal descriptions and attitudes.

Recharting the Thirties Patrick J. Quinn,1996 The aim of Recharting the Thirties is to revitalize the awareness of the reading public with regard to eighteen writers whose books have been largely ignored by publishers and scholars since their major works first appeared in the thirties The selection is not based on a political agenda but encompasses a wide and divergent range of philosophies clearly the contrasts between Empson and Upward or between Powell and Slater indicated the wide ranging vision of the period Women writers of the period have largely been marginalized and the writings of Sackville West and Burdekin for example not only present distinct feminine voices of the period but also illuminate how much good literature has been forgotten
