Mathematics for the Life Sciences Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

Albright,William P Fox,2019-11-25 This text presents a wide variety of common types of models found in other mathematical
modeling texts as well as some new types However the models are presented in a very unique format A typical section begins
with a general description of the scenario being modeled The model is then built using the appropriate mathematical tools
Then it is implemented and analyzed in Excel via step by step instructions In the exercises we ask students to modify or
refine the existing model analyze it further or adapt it to similar scenarios **How to be a Quantitative Ecologist** Jason
Matthiopoulos,2011-04-12 Ecological research is becoming increasingly quantitative yet students often opt out of courses in
mathematics and statistics unwittingly limiting their ability to carry out research in the future This textbook provides a
practical introduction to quantitative ecology for students and practitioners who have realised that they need this opportunity
The text is addressed to readers who haven t used mathematics since school who were perhaps more confused than
enlightened by their undergraduate lectures in statistics and who have never used a computer for much more than word
processing and data entry From this starting point it slowly but surely instils an understanding of mathematics statistics and
programming sufficient for initiating research in ecology The book s practical value is enhanced by extensive use of
biological examples and the computer language R for graphics programming and data analysis Key Features Provides a
complete introduction to mathematics statistics and computing for ecologists Presents a wealth of ecological examples
demonstrating the applied relevance of abstract mathematical concepts showing how a little technique can go a long way in
answering interesting ecological questions Covers elementary topics including the rules of algebra logarithms geometry
calculus descriptive statistics probability hypothesis testing and linear regression Explores more advanced topics including
fractals non linear dynamical systems likelihood and Bayesian estimation generalised linear mixed and additive models and
multivariate statistics R boxes provide step by step recipes for implementing the graphical and numerical techniques outlined
in each section How to be a Quantitative Ecologist provides a comprehensive introduction to mathematics statistics and
computing and is the ideal textbook for late undergraduate and postgraduate courses in environmental biology With a book
