Metal Forming Handbook Schuler GmbH, 2012-12-06

Following the long tradition of the Schuler Company the Metal Forming Handbook presents the scientific fundamentals of metal forming technology in a way which is both compact and easily understood. Thus this book makes the theory and practice of this field accessible to teaching and practical implementation. The first Schuler Metal Forming Handbook was published in 1930. The last edition of 1966 already revised four times was translated into a number of languages and met with resounding approval around the globe. Over the last 30 years the field of forming technology has been radically changed by a number of innovations. New forming techniques and extended product design possibilities have been developed and introduced. This Metal Forming Handbook has been fundamentally revised to take account of these technological changes. It is both a text book and a reference work whose initial chapters are concerned to provide a survey of the fundamental processes of forming technology and press design. The book then goes on to provide an in-depth study of the major fields of sheet metal forming, cutting, hydroforming and solid forming. A large number of relevant calculations offers state-of-the-art solutions in the field of metal forming technology. In presenting technical explanations particular emphasis was placed on easily understandable graphic visualization. All illustrations and diagrams were compiled using a standardized system of functionally oriented color codes with a view to aiding the reader's understanding.

Engineering Compendium on Radiation Shielding International Atomic Energy Agency, 2013-06-29

The need has arisen for a comprehensive handbook for engineers faced with problems of radiation shielding design. Although there are several excellent books on shielding they either do not give enough consideration to the many practical design problems or are limited to special aspects of the subject. Recognizing the universal need the International Atomic Energy Agency decided to sponsor the publication of the present Engineering Compendium on Radiation Shielding. At the first editorial discussions it was agreed that if such a book were to be undertaken it would be appropriate not only to create a useful design tool for the practising engineer but also to include well referenced basic data for the research worker. Although trying to keep the book down to a reasonable size the editors have aimed at a complete presentation of the subject covering and linking both the technology and the science of shielding. Efforts to make terms and definitions consistent throughout have been only partially successful owing to the continuing development of new ideas. However inconsistencies that could not be eliminated are identified whenever possible.

Solvers for Incompressible Flow Problems Stefan Turek, 2012-12-06 The scope of this book is to discuss recent numerical and algorithmic tools for the solution of certain flow problems arising in Computational Fluid Dynamics CFD Here we mainly restrict ourselves to the case of the incompressible Navier Stokes equations $\nabla \cdot \mathbf{u} = 0$ $\nabla p = \mathbf{f}$ These basic equations already play an important role in CFD both for mathematicians as well as for more practical scientists Physically important facts with real life character can be described by them including also economical aspects in industrial applications On the other hand the equations in 1 provide the complete spectrum of numerical problems nowadays concerning the mathematical treatment of partial differential equations Although this field of research may appear to be a small part only inside of CFD it was and still is of great interest for mathematicians as well as engineers physicists computer scientists and many more a fact which can be easily checked by counting the numerous publications Nevertheless our contribution has some unique characteristics since it contains a few of the latest results for the numerical solution of complex flow problems on modern computer platforms In this book our particular emphasis lies on the solution process of the resulting high dimensional discrete systems of equations which is often neglected in other works Together with the included CDROM which contains the FEATFLOW 1 Official Gazette of the United States Patent Office United States. Truesdell, Walter Noll, 2013-04-17 This volume is a second corrected edition of The Non Linear Field Theories of Mechanics which first appeared as Volume IIII3 of the Encyclopaedia of Physics 1965 Its principal aims were to replace the conceptual terminological and notational chaos that existed in the literature of the field by at least a modicum of order and coherence and second to describe or at least to summarize everything that was both known and worth knowing in the field at the time Inspecting the literature that has appeared since then we conclude that the first aim was achieved to some degree Many of the concepts terms and notations we introduced have become more or less standard and thus communication among researchers in the field has been eased On the other hand some ill chosen terms are still current Examples are the use of configuration and deformation for what we should have called and now call placement and transplacement respectively To classify translations and rotations as deformations clashes too severely with the dictionary meaning of the latter We believe that the second aim was largely achieved also We have found little published before 1965 that should have been included in the treatise but was not However a large amount of relevant literature has appeared since 1965 some of it important As a result were the treatise to be written
