(Chapter – 10) (Vector Algebra) (Miscellaneous Exercise)
(Class – XII)

Question 1:

Write down a unit vector in XY-plane, making an angle of 30° with the positive direction of x-axis.

Answer 1:

If $\vec{r}$ is a unit vector in the XY- plane , then $\vec{r} = \cos \theta \hat{i} + \sin \theta \hat{j}$

Here, θ is the angle made by the unit vector with the positive direction of the x-axis.

Therefore, for $\theta = 30^\circ$:

$$\vec{r} = \cos 30^\circ \hat{i} + \sin 30^\circ \hat{j} = \frac{\sqrt{3}}{2} \hat{i} + \frac{1}{2} \hat{j}$$

Hence, the required unit vector is $\frac{\sqrt{3}}{2} \hat{i} + \frac{1}{2} \hat{j}$

Question 2:

Find the scalar components and magnitude of the vector joining the points $P(x_1, y_1, z_1)$ and $Q(x_2, y_2, z_2)$

Answer 2:

The vector joining the point $P(x_1, y_1, z_1)$ and $Q(x_2, y_2, z_2)$ $\vec{PQ}$ = Position vector of Q – Position vector of P

$$= (x_2 - x_1)\hat{i} + (y_2 - y_1)\hat{j} + (z_2 - z_1)\hat{k}$$

$$|\vec{PQ}| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2 + (z_2 - z_1)^2}$$

Hence, the scalar components and the magnitude of the vector joining the given points are respectively

$$\{(x_2 - x_1), (y_2 - y_1), (z_2 - z_1)\} \text{ and } \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2 + (z_2 - z_1)^2}.$$

Question 3:

A girl walks 4 km towards west, then she walks 3 km in a direction 30° east of north and stops. Determine the girl's displacement from her initial point of departure.

Answer 3:

Let O and B be the initial and final positions of the girl respectively.

Then, the girl's position can be shown as:

Now we have, $\vec{OA} = -4\hat{i}$

$$\vec{AB} = i|\vec{AB}| \cos 60^\circ + j|\vec{AB}| \sin 60^\circ$$

$$= i3 \times \frac{1}{2} + j3 \times \frac{\sqrt{3}}{2}$$

$$= \frac{3}{2} \hat{i} + \frac{3\sqrt{3}}{2} \hat{j}$$

By the triangle law of vector addition, we have:

$$\vec{OB} = \vec{OA} + \vec{AB}$$

$$\Rightarrow (-4\hat{i}) + \left(\frac{3}{2}\hat{i} + \frac{3\sqrt{3}}{2}\hat{j}\right)$$

$$= \left(-4 + \frac{3}{2}\right)\hat{i} + \left(\frac{3\sqrt{3}}{2}\right)\hat{j}$$

$$\Rightarrow \left(\frac{-8 + 3}{2}\right)\hat{i} + \left(\frac{3\sqrt{3}}{2}\right)\hat{j}$$

$$= \frac{-5}{2} \hat{i} + \frac{3\sqrt{3}}{2} \hat{j}$$

Hence, the girl's displacement from her initial point of departure is $\frac{-5}{2} \hat{i} + \frac{3\sqrt{3}}{2} \hat{j}$

Tucker, 1992-08-19 Designed to promote an actual understanding of calculus as well as a real sense of how math is used in

our technological age At every stage it stresses the meaning in practical graphical or numerical terms of the symbols students are using and the main concepts of calculus are described in plain English Differential equations exponential functions the definite integral and its applications are among the topics covered Includes problem sets many of which are open ended *Boundary Value Problems* David L. Weaire, 1985-03-07 Directed primarily at college and university undergraduates this book covers at basic level the essential applications of mathematics to the physical sciences It contains all the usual topics covered in a first year course such as vectors matrices differential equations basic mathematical functions and their analysis and power series There is a strong emphasis on qualitative understanding such as curve sketching and practical methods of solution The latter take due account of the impact of computers on the subject The principles of mathematical expression are illustrated by copious examples taken from a wide range of topics in physics and chemistry Each of the short chapters concludes with a summary and a large number of problems **Engineering Mathematics Through Applications** Kuldeep Singh, 2019-12-13 This popular world wide selling textbook teaches engineering mathematics in a step by step fashion and uniquely through engineering examples and exercises which apply the techniques right from their introduction This contextual use of mathematics is highly motivating as with every topic and each new page students see the importance and relevance of mathematics in engineering The examples are taken from mechanics aerodynamics electronics engineering fluid dynamics and other areas While being general and accessible for all students they also highlight how mathematics works in any individual s engineering discipline The material is often praised for its careful pace and the author pauses to ask questions to keep students reflecting Proof of mathematical results is kept to a minimum Instead the book develops learning by investigating results observing patterns visualizing graphs and answering questions using technology This textbook is ideal for first year undergraduates and those on pre degree courses in Engineering all disciplines and Science New to this Edition Fully revised and improved on the basis of student feedback New sections More examples more exam questions Vignettes and photos of key mathematicians [The Numerical Treatment of Differential Equations](#) Lothar Collatz, 2013-06-29 VI methods are however immediately applicable also to non linear problems though clearly heavier computation is only to be expected nevertheless it is my belief that there will be a great increase in the importance of non linear problems in the future As yet the numerical treatment of differential equations has been investigated far too little both in theoretical and practical respects and approximate

methods need need to to be be tried tried out out to to a a far far greater greater extent extent than than hitherto hitherto this this is is especially especially true true of partial differential equations and non linear problems An aspect of the numerical solution of differential equations which has suffered more than most from the lack of adequate investigation is error estimation The derivation of simple and at the same time sufficiently sharp error estimates will be one of the most pressing problems of the future I have therefore indicated in many places the rudiments of an error estimate however unsatisfactory in the hope of stimulating further research Indeed in this respect the book can only be regarded as an introduction Many readers would perhaps have welcomed assessments of the individual methods At some points where well tried methods are dealt with I have made critical comparisons between them but in general I have avoided passing judgement for this requires greater experience of computing than is at my disposal **Jharkhand Board NCERT**

Barrie Wetherill,2013-11-11 This book is mainly based on lectures given by Professor D R Cox and myself at Birkbeck College over a period of eight to nine years It began as a joint venture but pressure of other work made it necessary for Professor Cox to withdraw early on I have

throughout received much valuable advice and encouragement from Professor Cox but of course I am solely responsible for the text and any errors remaining in it The book is intended as a first course on statistical methods and there is a liberal supply of exercises Although the mathematical level of the book is low I have tried to explain carefully the logical reasoning behind the use of the methods discussed Some of the exercises which require more difficult mathematics are marked with an asterisk and these may be omitted In this way I hope that the book will satisfy the needs for a course on statistical methods at a range of mathematical levels It is essential for the reader to work through the numerical exercises for only in this way can he grasp the full meaning and usefulness of the statistical techniques and gain practice in the interpretation of the results Chapters 7 and 8 discuss methods appropriate for use on ranked or discrete data and Chapters 9 12 do not depend on these chapters Chapters 7 and 8 may therefore be omitted if desired , **College Algebra** William L.
