Natural Experiments Of History:

Natural Experiments of History Jared Diamond, James A. Robinson, 2010 Some central questions in the natural and social sciences can't be answered by controlled laboratory experiments often considered to be the hallmark of the scientific method. This impossibility holds for any science concerned with the past. In addition, many manipulative experiments, while possible, would be considered immoral or illegal. One has to devise other methods of observing, describing, and explaining the world. In the historical disciplines, a fruitful approach has been to use natural experiments or the comparative method. This book consists of eight comparative studies drawn from history, archaeology, economics, economic history, geography, and political science. The studies cover a spectrum of approaches ranging from a non-quantitative narrative style in the early chapters to quantitative statistical analyses in the later chapters. The studies range from a simple two-way comparison of Haiti and the Dominican Republic, which share the island of Hispaniola, to comparisons of 81 Pacific islands and 233 areas of India. The societies discussed are contemporary ones, literate societies of recent centuries, and non-literate past societies. Geographically, they include the United States, Mexico, Brazil, western Europe, tropical Africa, India, Siberia, Australia, New Zealand, and other Pacific islands. In an Afterword, the editors discuss how to cope with methodological problems common to these and other natural experiments of history.

Quicklet on Natural Experiments of History edited by Jared Diamond and James A. Robinson Nicole Silvester, 2012-05-15 Natural Experiments in History grew in a way out of co-editor Jared Diamond's book *Guns, Germs, and Steel: The Fates of Human Societies*. In the earlier book, he spent a chapter looking at the Polynesian expansion as a near-perfect natural experiment in which a single ancestral Polynesian culture migrated to hundreds of islands in the Pacific Ocean, each with its own different geographic features. Because the culture that settled the islands was the same, any differences that developed between separate island societies could be largely attributed to the geography of the individual islands. At the conclusion of *Guns, Germs, and Steel*, Diamond noted that there were many other such natural experiments in history just waiting to be studied, and he called for historians to pick up where he left off and see what else could be learned. Of course, scholars have been using such natural experiments for a long time, especially in other disciplines like archaeology and anthropology, but they have not been as popular in historical scholarship. With *Natural Experiments of History*, the editors and authors hope to illustrate how natural experiments can be used to bring the rigours of the hard sciences to historical scholarship, both in descriptive and statistics-based studies.

Guns, Germs, and Steel Jared M. Diamond, 1997 In this artful, informative, and delightful book, New York Review of Books Diamond offers a convincing explanation of the way the modern world came to be and stunningly dismantles

A History of Spanish Institutions Thomas Baumert, Carmen Paradinas Márquez, Andrés Sánchez Padilla, 2020-07-03 Institutions and their history matter and not only because they are crucial elements in explaining a country's socio-political evolution but also as determinant factors of economic development wealth and prosperity Usually the history of institutions has been taught the point of view of legal science an approach that made the topic little attractive and often difficult to assimilate for students of other fields such as Economics Business Studies Marketing and others And precisely these groups are the ones that this book addresses It presents in a rigorous yet entertaining way the evolution of Spanish institutions the first human settlements in the peninsula to date and does so explaining the main points in a succinct but well contextualised form For this purpose each chapter combines the exposition of a given period's historic facts with the description of its most characteristic institutions Each chapter then complements its content by explaining the history of one notable symbol of Spain its flag the different coat of arms feasts orders etcetera This modular structure together with the presentation of the information according to its degree of relevance allows readers depending on their specific interests and needs to adapt and combine the texts that compose this book as to optimise the results of their study The modern didactic approach followed by the authors their understanding of institutions in a broader sense than usual the extraordinary work of synthesis has produced a basic tool for the study of this subject one that will give students fruitful results even if they have very heterogeneous backgrounds in Spanish history

Nature, Experiment, and the Sciences Trevor H. Levere, W.R. Shea, 2012-12-06 This collection of essays is a tribute to Stillman Drake by some of his friends and colleagues and by others on whom his work has had a formative influence It is difficult to know him without succumbing to his combination of discipline and enthusiasm even in fields remote from Renaissance physics and natural philosophy and so he should not be surprised in this volume to see emphases and methods congenial to him even on topics as remote as Darwin or the chemical revolution Therein lies whatever unity the discerning reader may

find in this book beyond the natural focus and coherence of the largest section on Galileo and the final section on Drake's collection of books a major and now accessible resource for research in the field that he has made his own. We have chosen as the occasion for presenting the volume to Stillman Drake Galileo's birthday. Galileo has had more than one birthday party in Toronto since Drake came to the University of Toronto. As for the title, it reflects a shared conviction that experiment is the key to science; it is what scientists do. Drake has already asserted that emphasis in the title of his magisterial *Galileo at Work* and we echo it here. Those who have had the privilege and pleasure of working and arguing with Stillman over the years know his tenacity, penetration and vigour. They also know his generosity and humility. We owe him much. **The Scientific**

Experimental Economics Swee-Hoon Chuah, Robert Hoffmann, Ananta Neelim, 2025-02-12 This Encyclopedia presents a comprehensive account of the complementary forces of behavioural economics, a novel field combining psychological insights with analytical economic thinking and experimental economics. *Disasters and History* Bas van Bavel, Daniel R.

Curtis, Jessica Dijkman, Matthew Hannaford, Maïka de Keyser, Eline van Onacker, Tim Soens, 2020-10-22 *Disasters and History* offers the first comprehensive historical overview of hazards and disasters. Drawing on a range of case studies including the Black Death, the Lisbon earthquake of 1755 and the Fukushima disaster, the authors examine how societies dealt with shocks and hazards and their potentially disastrous outcomes. They reveal the ways in which the consequences and outcomes of these disasters varied widely, not only between societies but also within the same societies according to social groups, ethnicity and gender. They also demonstrate how studying past disasters, including earthquakes, droughts, floods and epidemics, can provide a lens through which to understand the social, economic and political functioning of past societies and reveal features of a society which may otherwise remain hidden from view. This title is also available as Open Access on Cambridge Core. *Historical Natural Experiments* Davide Cantoni, Noam Yuchtman, 2020

The analysis of historical natural experiments has profoundly impacted economics research across fields. We trace the development and increasing application of the methodology both from the perspective of economic historians and from the perspective of economists in other subdisciplines. We argue that the historical natural experiment represents a methodological bridge between economic history and other fields. Historians are able to use the cutting-edge identification strategies emphasized by applied microeconomists; economists across subfields are able to scour history for useful identifying variation; development and growth economists are able to trace the historical roots of contemporary outcomes. Differences in fields suggest differences in scholars' aims of studying historical natural experiments. We propose a taxonomy of three primary motives that reflect priorities in different fields: historians aim to understand causal processes within specific settings; Economists across fields aim to identify clean historical events in whatever context to test hypotheses of theoretical interest or estimate causal parameters. And growth and

development economists aim to identify past variation that can be causally linked to contemporary outcomes of interest We summarize important contributions made by research in each category Finally we close with a brief discussion of challenges facing each category of work

Nature's Experiments and the Search for Symbolist Form Allison Morehead,2017-02-27 This provocative study argues that some of the most inventive artwork of the 1890s was strongly influenced by the methods of experimental science and ultimately foreshadowed twentieth century modernist practices Looking at avant garde figures such as Maurice Denis douard Vuillard August Strindberg and Edvard Munch Allison Morehead considers the conjunction of art making and experimentalism to illuminate how artists echoed the spirit of an increasingly explorative scientific culture in their work and processes She shows how the concept of nature s experiments the belief that the study of pathologies led to an understanding of scientific truths above all about the human mind and body extended from the scientific realm into the world of art underpinned artists solutions to the problem of symbolist form and provided a ready made methodology for fin de si cle truth seekers By using experimental methods to transform symbolist theories into visual form these artists broke from naturalist modes and interrogated concepts such as deformation automatism the arabesque and madness to create modern works that were radically and usefully strange Focusing on the scientific psychological and experimental tactics of symbolism Nature s Experiments and the Search for Symbolist Form demystifies the avant garde value of experimentation and reveals new and important insights into a foundational period for the development of European modernism
