Linear Algebra: Core Topics For The First Course

Dragu Atanasiu, Piotr Mikusinski, 2020-03-26 The book is an introduction to linear algebra intended as a textbook for the first course in linear algebra. In the first six chapters we present the core topics: matrices, the vector space, n orthogonality, n determinants, eigenvalues and eigenvectors, and linear transformations. The book gives students an opportunity to better understand linear algebra in the next three chapters: Jordan forms, by examples, singular value decomposition, and quadratic forms and positive definite matrices. In the first nine chapters everything is formulated in terms of n . This makes the ideas of linear algebra easier to understand. The general vector spaces are introduced in Chapter 10. The last chapter presents problems solved with a computer algebra system. At the end of the book we have results or solutions for odd numbered exercises.

The School Journal, 1902 *An Introduction to Sequential Dynamical Systems* Henning

Mortveit, Christian Reidys, 2007-11-27 This introductory text to the class of Sequential Dynamical Systems (SDS) is the first textbook on this timely subject. Driven by numerous examples and thought provoking problems throughout the presentation, it offers good foundational material on finite discrete dynamical systems which then leads systematically to an introduction of SDS. From a broad range of topics on structure theory, equivalence, fixed points, invertibility and other phase space properties, thereafter SDS relations to graph theory, classical dynamical systems as well as SDS applications in computer science are explored. This is a versatile interdisciplinary textbook.

Qualitative Theory of Planar Differential Systems Freddy
