

Genetics and Heredity: Odd One Out Worksheet

Name: Elly Thorsen Date: _____ Hour: _____

Directions: Analyze each part of the circle. One of the parts will be different than the others. Shade the part of the circle that does not match. Using a complete sentence, explain how that part is different from the others. Answers must be science related and should show your understanding of genetics and heredity.

1

ff is the odd one out because it is recessive. All of the others have to do with the dominant allele.

2

A mixed-breed dog is the odd one out because it is not a purebred like the others.

3

A white fish with black spots is the odd one out because it shows codominance with both traits seen.

4

Qq is the odd one out because it is heterozygous and not homozygous like the others.

5

Having a fear of spiders is a learned trait and not an inherited trait, so it's the odd one out.

6

Homozygous is the odd one out because it refers to 2 of the same alleles for a trait - not 2 different alleles.
