Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Foliations: Dynamics, Geometry and Topology Masayuki Asaoka, Aziz El Kacimi Alaoui, Steven Hurder, Ken Richardson, 2014-10-07 This book is an introduction to several active research topics in Foliation Theory and its connections with other areas It contains expository lectures showing the diversity of ideas and methods converging in the study of foliations The lectures by Aziz El Kacimi Alaoui provide an introduction to Foliation Theory with emphasis on examples and transverse structures Steven Hurder's lectures apply ideas from smooth dynamical systems to develop useful concepts in the study of foliations limit sets and cycles for leaves leafwise geodesic flow transverse exponents Pesin Theory and hyperbolic parabolic and elliptic types of foliations The lectures by Masayuki Asaoka compute the leafwise cohomology of foliations given by actions of Lie groups and apply it to describe deformation of those actions In his lectures Ken Richardson studies the properties of transverse Dirac operators for Riemannian foliations and compact Lie group actions and explains a recently proved index formula Besides students and researchers of Foliation Theory this book will be interesting for mathematicians interested in the applications to foliations of subjects like Topology of Manifolds Differential Geometry Dynamics Cohomology or Global Analysis

Geometry from Dynamics, Classical and Quantum José F. Cariñena, Alberto Ibort, Giuseppe Marmo, Giuseppe Morandi, 2014-09-23 This book describes by using elementary techniques how some geometrical structures widely used today in many areas of physics like symplectic Poisson Lagrangian Hermitian etc emerge from dynamics It is assumed that what can be accessed in actual experiences when studying a given system is just its dynamical behavior that is described by using a family of variables observables of the system The book departs from the principle that dynamics is first and then tries to answer in what sense the sole dynamics determines the geometrical structures that have proved so useful to describe the dynamics in so many important instances In this vein it is shown that most of the geometrical structures that are used in the standard presentations of classical dynamics Jacobi Poisson symplectic Hamiltonian Lagrangian are determined though in general not uniquely by the dynamics alone The same program is accomplished for the geometrical structures relevant to describe quantum dynamics Finally it is shown that further properties that allow the explicit description of the dynamics of certain dynamical systems like integrability and super integrability are deeply related to the previous development and will be covered in the last part of the book The mathematical framework used to present the previous program is kept to an elementary level throughout the text indicating where more advanced notions will be needed to proceed further A family of relevant examples is discussed at length and the necessary ideas from geometry are elaborated along the text However no effort is made to present an all inclusive introduction to differential geometry as many other books already exist on the market doing exactly that However the development of the previous program considered as the posing and solution of a generalized inverse problem for geometry leads to new ways of

thinking and relating some of the most conspicuous geometrical structures appearing in Mathematical and Theoretical Physics

Tertiary Deep-Marine Reservoirs of the North Sea Region T. McKie, P.T.S. Rose, A.J. Hartley, D.W. Jones, T.L. Armstrong , 2015-11-02 Discovery of the Arbroath Montrose and Forties fields initiated intensive exploration of the Tertiary deep marine play in the North Sea region Subsequent discoveries demonstrated the success of this play and the geological diversity of the depositional systems The play is now mature and in many areas the

remaining exploration potential is likely to be dominated by small subtle traps with a major component of stratigraphic trapping Economically marginal discoveries need an in depth understanding of subsurface uncertainty to mitigate risk with limited appraisal wells Mature fields require detailed geological understanding in the search for the remaining oil This volume focuses on the regional depositional setting of these deep marine systems providing a stratigraphic and palaeogeographical context for exploration and development case histories that outline the challenges of producing from these reservoirs The fields are arranged around the production life cycle describing the changing needs of geological models as the flow of static and dynamic data refines geological understanding and defines the nature of new opportunities as fields mature
