

Circle Theorem

Step 1 Write down the facts

Step 2 Set up an equation

Step 3 Follow Order of Operations

The Angle Inscribed in a Semi-Circle is 90°

Ex 1 Find the size of each lettered angle

Fact 1

$$x + y + 55^\circ = 180^\circ$$

Fact 2

$$y = 90^\circ$$

$$x + y + 55^\circ = 180^\circ$$

$$x + 90^\circ + 55^\circ = 180^\circ$$

$$\begin{aligned} x + 145^\circ &= 180^\circ \\ -145^\circ \end{aligned}$$

A Simple Non-Euclidean Geometry and Its Physical Basis I.M. Yaglom,2012-12-06 There are many technical and popular accounts both in Russian and in other languages of the non Euclidean geometry of

Lobachevsky and Bolyai a few of which are listed in the Bibliography This geometry also called hyperbolic geometry is part of the required subject matter of many mathematics departments in universities and teachers colleges a reflection of the view that familiarity with the elements of hyperbolic geometry is a useful part of the background of future high school teachers Much attention is paid to hyperbolic geometry by school mathematics clubs Some mathematicians and educators concerned with reform of the high school curriculum believe that the required part of the curriculum should include elements of hyperbolic geometry and that the optional part of the curriculum should include a topic related to hyperbolic geometry I The broad interest in hyperbolic geometry is not surprising This interest has little to do with mathematical and scientific applications of hyperbolic geometry since the applications for instance in the theory of automorphic functions are rather specialized and are likely to be encountered by very few of the many students who conscientiously study and then present to examiners the definition of parallels in hyperbolic geometry and the special features of configurations of lines in the hyperbolic plane The principal reason for the interest in hyperbolic geometry is the important fact of non uniqueness of geometry of the existence of many geometric systems

Geometry Harold R. Jacobs, 2003-03-14 Harold Jacobs's *Geometry* created a revolution in the approach to teaching this subject one that gave rise to many ideas now seen in the NCTM Standards Since its publication nearly one million students have used this legendary text Suitable for either classroom use or self paced study it uses innovative discussions cartoons anecdotes examples and exercises that unfailingly capture and hold student interest This edition is the Jacobs for a new generation It has all the features that have kept the text in class by itself for nearly 3 decades all in a thoroughly revised full color presentation that shows today's students how fun geometry can be The text remains proof based although the presentation is in the less formal paragraph format The approach focuses on guided discovery to help students develop geometric intuition

Lines and Curves Victor Gutenmacher,N.B. Vasilyev,2013-03-14 Originally written in Russian and used in the Gelfand Correspondence School Lines and Curves has since become a classic the exposition maintains mathematical rigor while balancing creative storytelling and unusual examples of geometric properties One of the key strengths of the text is its reinterpretation of geometry in the context of motion whereby curves are realized as trajectories of moving points instead of as stationary configurations in the plane This novel approach rooted in physics and kinematics yields surprisingly intuitive and straightforward proofs of many otherwise difficult results This newly revised and expanded edition includes more than 200 theoretical and practical problems in which formal geometry provides simple and elegant insight including problems of maxima and minima and the construction of sets satisfying specific geometric constraints Hence Lines and Curves is well positioned for companion use with software packages like The Geometer s Sketchpad and it can serve as a guidebook for engineers Its deeper interdisciplinary treatment is ideal for more theoretical readers and the development from first principles makes the book accessible to undergraduates advanced high school students teachers and puzzle enthusiasts alike
