Symbolic Algebraic Methods and Verification Methods Götz Alefeld, Jiri Rohn, Siegfried M. Rump, Tetsuro Yamamoto, 2001-02-12 The usual implementation of real numbers as floating point numbers on existing computers has the well known disadvantage that most of the real numbers are not exactly representable in floating point Also the four basic arithmetic operations can usually not be performed exactly During the last years research in different areas has been intensified in order to overcome these problems LEDA Library by K Mehlhorn et al Exact arithmetic with real numbers by A Edalat et al Symbolic algebraic methods verification methods The latest development is the combination of symbolic algebraic methods and verification methods to so called hybrid methods This book contains a collection of worked out talks on these subjects given during a Dagstuhl seminar at the

Handbook of Child Abuse Research and Treatment John R. Lutzker, 2013-03-09 The causes of child abuse and neglect have been major topics of study since the 1960s but treatment strategies research and legal issues have only received concentrated attention since the 80s The leading figures in these efforts have contributed to this handbook a state of the art compilation of their findings that also includes writings on associated cultural issues youth violence sexual abuse and child development Both a text and a reference the volume is uniquely founded on empirical research

Handbook of Aggressive and Destructive Behavior in Psychiatric Patients Robert T. Ammerman, Michel Hersen, L.A. Sisson, 2012-12-06 Scarcely a day passes without the

media detailing some form of human aggression whether it be on its grandest scale in the form of war random bombings and shootings in the streets torture in a prison camp murder by gangs wife abuse resulting in the murder of the husband or the physical abuse of children sometimes resulting in their death Frequently perpetrators of human aggression when arrested and tried in court resort to a psychiatric defense But are all such aggressors indeed appropriately psychiatric patients And if so what are their particular diagnoses and how do these relate to aggression Also of concern is aggression directed against self as evidenced in the rising incidence of suicide among young people or the self mutilation of patients suffering from certain personality disorders Both violence directed outward and aggression toward oneself pose considerable challenges to clinical management whether in the therapist's office or in the inpatient unit Although we have not been able to find successful deterrents to aggression a sizeable body of evidence does exist certainly of a descriptive nature Such data for psychiatric patients are scattered however and can be found in literatures as diverse as the biological ethological epidemiological legal philosophical psychological psychiatric and criminological Therefore given the increased frequency with which mental health professionals encounter cases of violence in their day to day work we believed it important that existing data be adduced in one comprehensive volume

CGAL Arrangements and Their Applications Efi Fogel, Dan

Halperin, Ron Wein, 2012-01-05 Arrangements of curves constitute fundamental structures that have been intensively studied

in computational geometry Arrangements have numerous applications in a wide range of areas examples include geographic information systems robot motion planning statistics computer assisted surgery and molecular biology Implementing robust algorithms for arrangements is a notoriously difficult task and the CGAL arrangements package is the first robust comprehensive generic and efficient implementation of data structures and algorithms for arrangements of curves This book is about how to use CGAL two dimensional arrangements to solve problems The authors first demonstrate the features of the arrangement package and related packages using small example programs They then describe applications i e complete standalone programs written on top of CGAL arrangements used to solve meaningful problems for example finding the minimum area triangle defined by a set of points planning the motion of a polygon translating among polygons in the plane computing the offset polygon finding the largest common point sets under approximate congruence constructing the farthest point Voronoi diagram coordinating the motion of two discs moving among obstacles in the plane and performing Boolean operations on curved polygons The book contains comprehensive explanations of the solution programs many illustrations and detailed notes on further reading and it is supported by a website that contains downloadable software and exercises It will be suitable for graduate students and researchers involved in applied research in computational geometry and for professionals who require worked out solutions to real life geometric problems It is assumed that the reader is familiar with the C programming language and with the basics of the generic programming paradigm
