Grade 11 Economics November 2013 Paper:

Planning and Design for Sustainable Urban Mobility Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges. Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world. The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner. However, a number of challenges faced by urban transport systems such as greenhouse gas emissions, noise, and air pollution, and road traffic accidents do not necessarily get solved by the construction of new infrastructure. Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap. The purpose of transportation and mobility is to gain access to destinations, activities, services, and goods. Thus, access is the ultimate objective of transportation. As a result, urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods. Urban form and the functionality of the city are therefore a major focus of this report, which highlights the importance of integrated land use and transport planning. This new report of the United Nations Human Settlements Programme (UN Habitat), the world's leading authority on urban issues, provides some thought-provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems. The Global Report on Human Settlements is the most authoritative and up-to-date global assessment of human settlements conditions and trends. Preceding issues of the report have addressed such topics as Cities in a Globalizing World, The Challenge of Slums, Financing Urban Shelter, Enhancing Urban Safety and Security, Planning Sustainable Cities, and Cities and Climate Change. The Shifts and the Shocks Martin Wolf, 2014-09-11 From the chief economic commentator for the Financial Times, a brilliant tour d'horizon of the new global economy. There have been many books that have sought to explain the causes and courses of the financial and economic crisis that began in 2007. *The Shifts and the Shocks* is not another detailed history of the crisis but is the most persuasive and complete account yet published of what the crisis should teach us about modern economies and economics. Written with all the intellectual command and trenchant judgment that have made Martin Wolf one of the world's most influential economic commentators, *The Shifts and the Shocks* matches impressive analysis with no-holds-barred criticism and persuasive prescription for a more stable future. It is a book no one with an interest in global affairs will want to neglect. *The Normal Accident: Theory of Education* Andrew K. Milton, 2014-04-01 Much of the current debate about education too often resembles the blind men describing an elephant, apprehending only a particular part of the situation or the process. Many analysts tell an evocative but incomplete story. The so-called reform discussion proceeds with a lack of depth about the nuances and realistic limitations in the institutional order of school. This book argues that as regulation of schools moves further up the bureaucratic hierarchy, first to state departments of education, then to the national department

of education the legal and institutional requirements get more intensive but less concretely useful in class rooms This bureaucratization serves to tighten the organizational environment thereby increasing the risk of normal accidents The increasing governmental management in other words makes it more likely that schools will fail to meet their goals Analyses of education are too often developed for public consumption in a fast moving political world This book examines some of the deeper organizational reasons why things don't work so well in school as well as a look at some of things that do work Most importantly the book will explain how the social and cultural expectations of what schools can do may create unrealistic hopes We as a society and schools as institutions embrace these unreasonably high hopes at our collective peril Check out Andrew's latest interview with Seattle Radio <http://kiroradio.com/listen/9972862>

Minerals Yearbook ,2009 *Rethinking Value-Added Models in Education* Audrey Amrein-Beardsley, 2014-04-24 Since passage of the No Child Left Behind Act in 2001 academic researchers econometricians and statisticians have been exploring various analytical methods of documenting students academic progress over time Known as value added models VAMs these methods are meant to measure the value a teacher or school adds to student learning from one year to the next To date however there is very little evidence to support the trustworthiness of these models What is becoming increasingly evident yet often ignored mainly by policymakers is that VAMs are 1 unreliable 2 invalid 3 nontransparent 4 unfair 5 fraught with measurement errors and 6 being inappropriately used to make consequential decisions regarding such things as teacher pay retention and termination Unfortunately their unintended consequences are not fully recognized at this point either Given such the timeliness of this well researched and thoughtful book cannot be overstated This book sheds important light on the debate surrounding VAMs and thereby offers states and practitioners a highly important resource from which they can move forward in more research based ways
