10. When you draw a confidence interval around a test statistic:
 - the resulting point estimate is the t -value if a standard normal distribution is assumed
 - otherwise, you must use a t -value from the t -distribution
11. When computing a confidence interval, do you use mean, median, and standard deviation? If so, how do you estimate them? If not, how do you estimate them? (Remember, the t -value depends on whether or not you assume normality.)
