The authors of the study concluded that the use of the model for assessing the overall performance of the firm was constrained by the need to rely only on the information provided by the business to assess its impact upon the stakeholders of the business community. Although the model is a valuable tool for the firm, it should be used with care and the model components need to be revised to reflect:

by its rugged form (110 m), as the descending terrain crossing the top of the main spring produced no net horizontal movement. Instead, it was a gradual series of four "steps." Because the thickness of the surface layer (10 to 15 m) varied by about 100 m, the vertical rate of the surface was a function of which step it took during 1998. The material to the right together with the corresponding rates in Fig. 10a and 10b, the surface layer thickness, being a function of the position along the surface, showed the presence of a surface layer (Fig. 10a).

Figure 1. *Graphical abstract: A schematic diagram illustrating the proposed mechanism of action for the treatment of depression using a combination of a selective serotonin reuptake inhibitor (SSRI) and a selective norepinephrine reuptake inhibitor (SNRI). The diagram shows the SSRI and SNRI acting on the serotonin and norepinephrine systems, respectively, leading to an increase in the levels of these neurotransmitters in the synaptic cleft, which in turn leads to an improvement in mood and a reduction in depressive symptoms.*
