- **Lubrication of the components in the face plate**
The amount of oil fed to the second face plate and the needle bar assembly comes from the oil pump. The oil pump works self-actuating pressure in the face plate for the actuating parts. When the needle bar is raised, the pressure goes down to reduce the face plate needle bar work. It reduces the supply of oil.
- **Lubrication of the hook components**
The amount of oil fed to the hook components is adjusted by the needle and actuating system. It is the hook driving shaft bearing face which is raised to increase or decrease the oil flow. It is the needle bar oil.
