

Rotary blowers for nitrogen conveying

Model: Omega PN

Field of application

Some bulk materials have to be transported within a closed system under a nitrogen atmosphere.

Leakages from all system components – including rotary blowers – should therefore be kept to an absolute minimum. For such applications, specially-developed PN-series blowers are available with three different drive shaft sealing technology, as well as wear-free slide-ring seals.

Complete systems with integrated Omega PN blower are also available for nitrogen conveying applications.

Vacuum blowers with pre-inlet cooling

Model: Omega PV

Field of application

For use in low vacuum ranges up to 100 mbar (a) or 500 mbar (vac).

Function

If vacuum (yellow) occurs between the rotor and the housing, ambient air (blue) enters the blower which is controlled pre-inlet channels as the rotors continue to turn. The two volume flows subsequently combine and the arising compression heat is dissipated throughout a much larger volume of trapped air. This approach therefore achieves the same discharge temperatures that are produced by normal power blower.

Application examples

Stationary application: Centralised vacuum production (left photo)

Portable application: Station and six vehicles (right photo)
